working for clean rivers 2011-Tabor to the River Program Update

TABOR *to the* RIVER

partnerships for sewer, green stormwater, and watershed improvements

Greetings Neighbors-

2011 was a busy year in the Tabor to the River Program!

Thank you for being a partner for watershed health and helping the Willamette River. Here is a summary of what we've accomplished together since work began two years ago.

- Completed 137 green streets, 16 residential rain gardens, 5 commercial stormwater retrofits and repaired 8,000 feet of sewer pipe
- Removed 56 acres of invasive plants and planted 3 acres of native plants in Mt. Tabor Park
- Completed 3 years of bird surveys, the last two years by Audubon Society of Portland volunteers
- Planted 520 street trees with Friends of Trees (and you!)

You marked stormdrains, participated in meetings, rain garden and naturescaping classes, built rain gardens, planted trees, added more natives to your gardens and shared your interest in helping our watershed with others. Thank you

What's in Store for 2012

- Division Streetscape Project design completion and start of construction on street and safety improvements, 63 green street facilities, 4,500 feet of new sewer pipes and planting street trees
- Clinton Street Project design completion and start of construction on 26 green street facilities, two blocks of porous concrete pavement and 3,700 feet of sewer pipe
- Railroad Crossing Project construction begins
- Ivon-Madison Project design completion and start of construction on 22 green street facilities
