## SE Clay Green Street Project
## Construction Update

October 3, 2013

Stormwater runoff can impact water quality in rivers and streams. Portland uses green streets, ecoroofs, trees and other green infrastructure to increase sewer system efficiency, and protect water quality, public health, and the environment. Green infrastructure keeps stormwater out of the sewer system, filters pollutants, provides habitat and increases neighborhood green space for healthier watersheds.

Environmental Services is completing construction of green street planters, ADA Ramps, and pedestrian improvements at SE Water, 2nd Avenue, and 6th Avenue along Clay Street. Work has begun at the intersections of SE 3rd and SE 8th and Clay Street.

Construction may cause occasional lane restrictions and detours, but Clay Street will mostly remain open. Pipe work may create partial closures on Clay.

Environmental Services Watershed Revegetation crews come back in spring 2014 to plant in the green street planters.

### What to Expect During Construction

- Some street parking will be unavailable within the work zones during work and non-work hours.
- Equipment and material will be secured and left on the street within the designated work zone after work hours.
- Construction hours are 7:00 a.m. to 6:00 p.m. Monday through Friday. The contractor may schedule working during the same hours on Saturdays.
- There will be access to all properties during construction.
- Watch for flaggers and follow their instructions for everyone's safety.
- A city construction inspector will be on-site during work hours, and should be able to assist you with construction concerns. Inspectors typically wear a "City of Portland" safety vest and hard hat.
