All SAT scores after April 1995 are reported on a new recentered scale. Scores from previous years have been converted over to the new scale. PPS and state converted means prior to 1996 should be regarded as close approximations. For 1984-1986 national means, a formula was applied to the original mean and standard deviation to convert the mean to the recentered scale. For 1987-1995 national means, individual scores were converted to the recentered scale and then the mean was recomputed.

Note: Scores in boxes were converted using a chart from ETS. Other scores were taken directly from reports from ETS.

While converting scores/reports to Access and Excel from Quattro Pro, it was discovered that the denominator for the percent of graduates tested prior to 1995 did not include MLC students while the numerator did. These percents were adjusted to reflect the appropriate denominators and some percentages on reports including data from 2000 or later may be off by one point from previous reports

*ETS did not provide national or state percentages after 2002.
