ITE National Bicycle and Pedestrian Documentation Project

City of Portland 2-hour Count Results

September 2011

Please be aware that Portland area count methodology has changed since 2009, and numbers between years are not directly comparable.

Past years counts included entire trail or street intersections and counted users on all legs of the inersection. In, 2010 counts switched to a single corridor 'cut-line' approach, only counting one street or trail.

In some cases, a second 'crossing' count was taken to collect information about demand for the cross street or trail.

Weekday

Location: **Broadway Bridge @ South Side**
Count Data: **Location 5 - Weekday**
Date: Sep 15, 2011, 5:00-7:00 P.M.
