NOTICE OF A TYPE I DECISION ON A PROPOSAL IN YOUR NEIGHBORHOOD

The Bureau of Development Services has approved a proposal in your neighborhood. The reasons for the decision are included in this notice. If you disagree with the decision, you can appeal it to the Oregon Land Use Board of Appeals (LUBA) at 550 Capitol St. NE, Suite 235, Salem, OR 97301. The phone number for LUBA is 1-503-373-1265. Information on how to appeal this decision is listed at the end of this notice.

CASE FILE NUMBER: LU 08-138924 LDP

GENERAL INFORMATION

Applicant: Ken Jenson
21902-C SE Foster Rd
Damascus, OR 97089

Site Address: 12524 SE HAROLD ST

Legal Description: TL 1000 0.24 ACRES, SECTION 14 1 S 2 E
Tax Account No.: R992141650
State ID No.: 1S2E14CB 01000
Quarter Section: 3643

Neighborhood: Powellhurst-Gilbert, contact John McDonald at 503-753-4226.
Business District: None
District Coalition: East Portland Neighborhood Office, contact Richard Bixby at 503-823-4550.

Plan District: Johnson Creek Basin

Zoning: R5a (Single Dwelling Residential-5,000 with "a" Alternative Design Density Overlay)

Case Type: LDP (Land Division Partition)
Procedure: Type I, an administrative decision with appeal to the Oregon Land Use Board of Appeals (LUBA).

Proposal:

The applicant is proposing a 2-lot land division. Proposed Parcel 2 will measure approximately 6,374-sq. ft. and retain the existing house on the site. Proposed Parcel 1 will measure approximately 4,045-sq. ft. The applicant has proposed to remove the existing garage and carport located on the site. Proposed Parcel 1 is approximately 32 feet wide. In the R5 zone, the minimum lot width requirement to create a standard sized lot is 36 ft.

Parcel 1 is therefore considered a “narrow lot.” In order to create new narrow lots, the applicant must meet the narrow lot standards (Zoning Code section 33.611.200.C) on Parcel 1. One of the narrow lot standards require the applicant to maintain 15 feet of contiguous curb space associated with each narrow lot created, in order to maintain on street parking in the area

This partition is reviewed through a Type I land use review because: (1) the site is in a residential zone; (2) fewer than four lots are proposed; (3) none of the lots, utilities, or services are proposed within a Potential Landslide Hazard or Flood Hazard Area, and; (4) no other concurrent land use reviews (such as an Adjustment, Design Review, or Environmental Review) are requested or required (see 33.660.110).

For purposes of State Law, this land division is considered a partition. To partition land is to divide an area or tract of land into two or three parcels within a calendar year (See ORS 92.010).

Relevant Approval Criteria:

In order to be approved, this proposal must comply with the approval criteria of Title 33. The relevant approval criteria are:

- **33.660.120, Approval Criteria for Land Divisions in Open Space and Residential Zones.**

ANALYSIS

Site and Vicinity: The site is relatively flat with one single family home and a detached garage and carport. The area surround the site is made up of predominately single family homes of various types and sizes. The properties located north of the site, across SE Harold St. are zoned R7 (Single family residential 7,000) which allows lower levels of density, but maintains the area’s character of primarily single family homes.

Zoning: The R5 designation is one of the City’s single-dwelling zones which is intended to preserve land for housing and to promote housing opportunities for individual households. The zone implements the comprehensive plan policies and designations for single-dwelling housing. The “a” overlay is intended to allow increased density that meets design compatibility requirements. It focuses development on vacant sites, preserves existing housing stock, and encourages new development that is compatible with the surrounding residential neighborhood. This land division proposal is not using any of the provisions of the “a” overlay.

The Johnson Creek Basin plan district provides for the safe, orderly, and efficient development of lands which are subject to a number of physical constraints, including significant natural resources, steep and hazardous slopes, flood plains, wetlands, and the lack of streets, sewers, and water services. There are no specific requirements of the Johnson Creek Basin Plan District applicable to this application.

Land Use History: City Records indicate no previous land use history.

Agency and Neighborhood Review: A Notice of Proposal in your Neighborhood was mailed on July 15, 2008

1. Agency Review: Several Bureaus and agencies have responded to this proposal. Please see Exhibits E for details. The comments are addressed under the appropriate criteria for review of the proposal.

2. Neighborhood Review: No written responses have been received from either the Neighborhood Association or notified property owners in response to the proposal.

APPROVAL CRITERIA-

APPROVAL CRITERIA FOR LAND DIVISIONS IN OPEN SPACE AND RESIDENTIAL ZONES

33.660.120 The Preliminary Plan for a land division will be approved if the review body finds that the applicant has shown that all of the following approval criteria have been met.

The relevant criteria are found in Section **33.660.120 [A-L], Approval Criteria for Land Divisions in Open Space and Residential Zones**. Due to the specific location of this site, and the nature of the proposal, some of the criteria are not applicable. The following table summarizes the applicability of each criterion.

Criterion	Code Chapter	Topic	Applicability Findings
A	33.610	Lots	Applicable - See findings below
B	33.630	Trees	Not applicable - No significant trees or trees in excess of 6 inches in diameter located fully on the site
C	33.631	Flood Hazard Area	Not applicable - The site is not within the flood hazard area.
D	33.632	Potential Landslide Hazard Area	Not applicable - The site is not within the potential landslide hazard area.
E	33.633	Phased Land Division or Staged Final Plat	Not applicable - A phased land division or staged final plat has not been proposed.
F	33.634	Recreation Area	Not applicable - This is not required where the proposed density is less than 40 units.
G	33.635 .100	Clearing and Grading	Applicable - See findings below.
G	33.635 .200	Land Suitability	Applicable - See findings below.
H	33.636	Tracts and Easements	Not applicable - No tracts or easements have been proposed or will be required.
I	33.639	Solar Access	Not Applicable - All of the proposed parcels are interior lots (not on a corner). In this context, solar access standards express no lot configuration preference.
J	33.640	Streams, Springs, and Seeps	Not applicable - No streams, springs, or seeps are evident on the site.
K	33.641	Transportation Impacts	Applicable - See findings below
L	33.651 - 33.654	Services and Utilities	Applicable - See findings below

Applicable Approval Criteria are:

A. Lots. The standards and approval criteria of Chapters 33.605 through 33.612 must be met.

Findings: Chapter 33.610 contains the density and lot standards applicable in the RF through R5 zones. These density and lot dimension standards ensure that lots are

consistent with the desired character of each zone while allowing lots to vary in size and shape provided the planned intensity of each zone is respected.

Density Standards

Density standards match housing density with the availability of services and with the carrying capacity of the land in order to promote efficient use of land, and maximize the benefits to the public from investment in infrastructure and services. These standards promote development opportunities for housing and promote urban densities in less developed areas. Maximum densities ensure that the number of lots created does not exceed the intensity planned for the area, given the base zone, overlay zone, and plan district regulations. Minimum densities ensure that enough dwelling units can be developed to accommodate the projected need for housing.

The method used to calculate density depends on whether a street is created as part of the land division, and whether the site is subject to certain environmental constraints.

In this case, a street is not proposed or required, and the site is not within the environmental zone, potential landslide hazard area, or flood hazard area. Therefore, the maximum and minimum density for this site is as follows:

Minimum = 10,419 square feet * .80 ÷ 5,000 square feet = 1.66 (which rounds up to a minimum of 2 lots, per 33.930.020.A)

Maximum = 10,419 square feet ÷ 5,000 square feet = 2.08 (which rounds down to a maximum of 2 lots, per 33.930.020.B)

If the minimum required density is equal to or larger than the maximum allowed density, then the minimum density is automatically reduced to one less than the maximum. Therefore in this case the minimum density is reduced to 1.

The applicant is proposing 2 lots. The density standards are therefore met.

Lot Dimensions

The lot dimension standards ensure that: (1) each lot has enough room for a reasonably-sized house and garage; (2) lots are of a size and shape that development on each lot can meet the development standards of the Zoning Code; (3) lots are not too large relative to the planned density; (4) each lot has room for at least a small, private outdoor area; (5) lots are compatible with existing lots; (6) lots are wide enough to allow development to orient toward the street; (7) lots don't narrow to an unbuildable width close to the street; (8) each lot has adequate access from the street; (9) each lot has access for utilities and services; and (10) lots are not landlocked.

The dimensions of the proposed lots as compared to the required lot dimension standards is shown in the following table (this information is found in Table 610-2 of the Zoning Code):

	R5 Zone Requirement	Proposed Lot 1	Proposed Lot 2
Minimum Lot Area	3,000 sq. ft.	6,374 sq.	4,045 sq.
Maximum Lot Area	8,500 sq. ft.	ft.	ft.
Minimum Lot Width*	36 ft.	50.46 ft.	32.02 ft.
Minimum Lot Depth	50 ft.	126 ft.	126 ft.
Minimum Front Lot Line	30 ft.	50.46 ft.	32.02 ft.

* Width is measured at the minimum front building setback line

Narrow Lots

Parcel 1 is approximately 32 feet wide — narrower than the standard minimum width for the R5 zone, as shown in the table above. Section 33.610.200.D of the Zoning Code, however, allows narrower lots if the future development can meet certain standards:

- **If the lot abuts an alley, then vehicle access is allowed only from the alley;**
- **If the lot does not have vehicle access from an alley, then there must be at least 15 contiguous feet of uninterrupted curb space on the abutting street for each lot being created under these provisions (lots that abut a pedestrian connection or common green are exempt from this standard).**
- **Lots must be configured so that at the time of development the length of the garage wall will be no more than 50% of the length of the street-facing building façade.**
- **Lots that will be developed with attached houses must be configured so that 60 percent of the area between the front lot line and the front building line can be landscaped at the time of development;**
- **When a driveway is proposed to provide vehicle access to more than two lots, it must be an alley; and**

The applicant has demonstrated that Parcel 1 can meet the narrow lot standards for the following reasons:

Alley access:

- The site does not have access from an alley, so this standard does not apply.

Preserves on-street parking

- Exhibit C-1 show that 15-feet of uninterrupted curb space can be preserved for the narrow lot along SE Harold St. after provision of driveways serving the lots (including the required 3 foot curb returns on either side of the driveway entrance). A condition of approval is required to assure that this curb space will continue to be preserved when the lots are developed or re-developed.

50 percent garage wall limitation

- The widest house that could be developed on Parcel 1 would be 22 feet wide, assuming it was placed in the widest portion of the lot, and complied with the 5 foot side yard setbacks requirement on either side. A standard one-car garage typically includes a 9-foot wide garage door with 1 ft. of structural support on either side. A 22 foot wide house could have a garage wall up to 11 feet wide and still comply with the 50% garage wall limitation standard. Therefore it can be assumed that any new house on the lot could provide at least a one-car garage and still comply with the 50% garage wall limitation.

The findings above describe how the applicable lot standards are met. With the conditions of approval described above, this criterion is therefore met.

G. Clearing, Grading and Land Suitability. The approval criteria of Chapter 33.635, Clearing, Grading and Land Suitability must be met.

The approval criteria of Chapter 33.635 are found in two groups – clearing and grading, and land suitability.

33.635.100 – Clearing and Grading

- A. Existing contours and drainage patterns of the site must be left intact wherever practicable. Where alteration to existing drainage patterns is proposed, it must not adversely impact adjacent properties by significantly increasing volume of runoff or erosion;**
- B. Clearing and grading should be sufficient for construction of development shown on the Preliminary Clearing and Grading Plan;**
- C. Clearing and grading should be limited to areas of the site that are reasonably necessary for construction of development shown on the Preliminary Clearing and Grading Plan;**
- D. Topsoil must be preserved on site to the extent practicable for use on the site after grading is complete; and**
- E. Soil stockpiles must be kept on the site and located in areas designated for clearing and grading as much as is practicable.**

Findings: The regulations of Chapter 33.635 ensure that the proposed clearing and grading is reasonable given the infrastructure needs, site conditions, tree preservation requirements, and limit the impacts of erosion and sedimentation to help protect water quality and aquatic habitat.

In this case the site is primarily flat, and is not located within the Potential Landslide Hazard Area. Therefore, no significant clearing or grading will be required on the site to make the new lots developable. In addition, there are no trees required to be preserved in the areas where new development on the site is anticipated. This criteria is met.

This criteria is met.

33.635.200 – Land Suitability

Where geologic conditions or historic uses of the site indicate a hazard may exist, the applicant must show that the proposed land division will result in lots that are suitable for development. The applicant may be required to make specific improvements in order to make the lots suitable for their intended uses and the provision of services and utilities.

The site is currently in residential use, and there is no record of any other use in the past. Although the site is currently connected to the public sanitary sewer, there is an old septic system on the site. The City has no record that this facility was ever decommissioned. Prior to final plat, the applicant must meet the requirements of the Site Development Section of the Bureau of Development Services for the decommissioning of this facility. With this condition, the new lots can be considered suitable for new development, and this criterion is met.

K. Transportation impacts. The approval criteria of Chapter 33.641, Transportation Impacts, must be met; and,

The relevant approval criteria of Chapter 33.641 are found in the two paragraphs below.

33.641.020. The transportation system must be capable of safely supporting the proposed development in addition to the existing uses in the area. Evaluation factors include: street capacity and level-of-service; vehicle access and loading;

on-street parking impacts; the availability of transit service and facilities and connections to transit; impacts on the immediate and adjacent neighborhoods; and safety for all modes.

33.641.030. The applicant may meet the criterion in Section 33.641.020, above, by including mitigation measures as part of the land division proposal. Mitigation measures must be acceptable to the City Engineer and may include providing transportation demand management measures, an access management plan, constructing streets or bicycle, pedestrian, or transit facilities on or off the site or other capital improvement projects such as traffic calming devices.

Findings: The regulations of Chapter 33.641 allow the traffic impacts caused by dividing and then developing land to be identified, evaluated, and mitigated for if necessary. Small land divisions involving only a few dwelling units may not require a formal transportation impact study, while it might be required for larger projects (Title 17 includes technical standards describing when a more formal study is required).

The site has approximately 82 feet of frontage on SE Harold St. SE Harold St. is classified as a Neighborhood collector, Community transit street, City bikeway and walkway. Tri-Met provides a bus stop for transit service approximately 250 feet from the site on SE Harold via bus 10. Parking is currently allowed on SE Harold St. on both sides. There is one driveway entering the site that provides access to off-street parking for the existing house.

SE Harold St. is improved with a paved roadway, and a gravel shoulder on both sides. There are no curbs, planter strips, or sidewalks. In reviewing this land division, Portland Transportation relies on accepted civil and traffic engineering standards and specifications to determine if existing street improvements for motor vehicles, pedestrians and bicyclists can safely and efficiently serve the proposed new development. In this case Portland Transportation has determined that curb and sidewalk improvements must be made in order to ensure that safe pedestrian travel is possible within the proposed development. To accommodate these improvements, as well as an associated stormwater facility discussed later in this report, additional right-of-way must be dedicated along the frontage of the site. With those improvements, one additional dwelling can be safely served by this existing street without having any significant impact on the level of service provided.

This criterion is met, with the condition that curb and sidewalk improvements are made, and the required right-of-way dedication is shown on the Final Plat.

L. Services and utilities. The regulations and criteria of Chapters 33.651 through 33.654, which address services and utilities, must be met.

Findings: Chapters 33.651 through 33.654 address water service standards, sanitary sewer disposal standards, stormwater management, utilities and rights of way.

- The water standards of 33.651 have been verified. An existing 8-inch water main is available in SE Harold St. Water is available to serve the proposed development from the water main in SE Harold St. Parcel 2 has an existing water service from that main. As a result of the proposed land division, the water line that provides service to the existing home on Parcel 2 will no longer be located entirely on the same lot as the home. Title 21 requires that the water service connection be located along the frontage of the lot to be served. Water service connections are not allowed by means of an easement. Therefore, prior to final plat, the water service for the existing home must be relocated, so that the service connection will be located along the frontage of the Parcel 2. As previously discussed, Transportation (PDOT) is requiring frontage improvements at this site along SE Harold St. There is an existing 8" cast iron

water main in SE Harold Street located approximately 9' north from the north property line. If the proposed curbs, gutters, swales, planter boxes or any storm facilities are located less than 2' clearance to the existing water main, then water main relocation is required by Portland Water Bureau at the applicant's expense.

- The sanitary sewer standards of 33.652 have been verified. There is an existing 8 inch public sanitary sewer located in SE Harold St. that can serve the sanitary needs of the proposed lots. Lot 2 has an existing sewer service from that main. See Exhibit E-1 for more details.
- The technical standards of Chapter 33.653 related to stormwater management have been verified. The findings below for the Stormwater Management Approval Criteria of 33.653.020 incorporate a discussion of how the technical standards have been satisfied by the applicant's stormwater proposal.

33.653.020 Stormwater Management Approval Criteria

- A. If a stormwater tract is proposed or required, an adequate amount of land and an appropriate location must be designated on the Preliminary Plan; and**
- B. The application must show that a stormwater management system can be designed that will provide adequate capacity for the expected amount of stormwater.**

Findings: No stormwater tract is proposed or required. Therefore, criterion A is not applicable.

The City of Portland requires that stormwater from development be cleaned and disposed of in a manner that meets the requirements of the City's Stormwater Management Manual. In order to meet this approval criterion, land division proposals must demonstrate an approved method of cleaning (water quality treatment), detention (delayed release), and an approved disposal point.

The Stormwater Management Manual contains a hierarchy of acceptable methods of stormwater treatment and disposal. The hierarchy requires that applicants first explore the use of methods that have a lower potential impact on groundwater, such as on-site surface infiltration swales and infiltration planters. If these methods are not feasible on a site, applicants may move lower on the hierarchy, to methods that inject water deeper into the ground through mechanical devices such as drywells or sumps, or carry it off of the site into storm sewers, drainageways, or other approved disposal points.

In addition to determining appropriate treatment and disposal methods by working through the hierarchy in the Stormwater Management Manual, stormwater facilities must be sized, through engineering calculations, to accommodate the expected amounts of stormwater. In some cases, sizing a stormwater facility necessitates testing the infiltration rate of the soil at the site.

The applicant has proposed the following stormwater management methods (Exhibits A-4, A-5, A-6, A-7, A-10 and C-1), and the Bureaus have responded as follows (Exhibits E-1 and E-5):

- **Public Street Improvements:** As a condition of this land use approval, the Office of Transportation requires the applicant to improve the frontage of the site to City standards, with curbs and sidewalks (discussed earlier in this report). Stormwater from

these new impervious areas will be directed into a 8-foot wide infiltration swale located between the curb and the new sidewalk. BES has indicated that surface infiltration is the preferred method of public stormwater disposal at this site. The agency has confirmed that the proposed swale is of a size and proposed design that is adequate to provide infiltration for the quantity of water generated from the new impervious areas. To accommodate this stormwater facility within the public right-of-way, a dedication along the frontage of the site must be provided on the final plat.

BES requires a Public Works Permit for the construction of such a swale. The applicant must provide engineered designs and financial guarantees of performance prior to final plat approval.

- **Parcel 1:** Stormwater from this Parcel will be directed to an individual shallow drywell or eastside soakage trench that will treat the water and slowly infiltrate it into the ground. This lot has sufficient area for a stormwater facility that can be adequately sized and located to meet setback standards, and accommodate water from a reasonably-sized home. Site Development has indicated conceptual approval of the soakage trench.
- **Parcel 2 (the lot with the existing house):** The downspouts of the existing house are directed to the ground and to splash blocks. Because the house has a basement, stormwater must be collected or otherwise comply with the Stormwater Manual. Prior to final plat approval, the applicant must demonstrate that the existing house complies with the Stormwater Management Manual. If a stormwater retrofit is required, then final approval of a plumbing permit will be required prior to final plat approval.

With the conditions of approval described above, the stormwater management criteria are met. As shown by the findings above, the Services and Utilities criteria are met.

Right of Way Approval Criteria

Chapter 33.654 contains standards and approval criteria for rights of way. Due to the location of this site, and the type of street that is proposed, some of the criteria are not applicable. The following table summarizes the applicability of each criterion.

Code Section	Topic	Applicability Findings
33.654.110.B.1	Through streets and pedestrian connections	Applicable - See findings below
33.654.110.B.2	Dead end streets	Not applicable - No dead end streets are proposed.
33.654.110.B.3	Pedestrian connections in the I zones	Not applicable - The site is not located within an I zone.
33.654.110.B.4	Alleys in all zones	Not applicable – No alleys are proposed or required.
33.654.120.C.1	Width of the street right-of-way	Not applicable – The proposal does not include a new street
33.654.120.C.3.c	Turnarounds	Not applicable – No turnarounds are proposed or required.
33.654.120.D	Common Greens	Not applicable – No common greens are proposed or required.

Code Section	Topic	Applicability Findings
33.654.120.E	Pedestrian Connections	Not applicable – There are no pedestrian connections proposed or required.
33.654.120.F	Alleys	Not applicable – No alleys are proposed or required.
33.654.120.G	Shared Courts	Not applicable – No shared courts are proposed or required.
33.654.130.A	Utilities	Applicable - See findings below.
33.654.130.B	Extension of existing public dead-end streets and pedestrian connections	Not applicable – There are no existing public dead-end street or pedestrian connections adjacent to the site.
33.654.130.C	Future extension of proposed dead-end streets and pedestrian connections	Not applicable – No street extensions are required to serve abutting sites that are further dividable.
33.654.130.D	Partial rights-of-way	Not applicable – No partial public streets are proposed or required.

Applicable Approval Criteria are:

33.654.110.B.1 Approval criterion for through streets and pedestrian connections in OS, R, C, and E Zones. In OS, R, C, and E zones, through streets and pedestrian connections are required where appropriate and practicable, taking the following into consideration:

- a. **Through streets should generally be provided no more than 530 feet apart, and pedestrian connections should generally be provided no more than 330 feet apart. Through street and pedestrian connections should generally be at least 200 feet apart;**
- b. **Where the street pattern in the area immediately surrounding the site meets the spacing of subparagraph a., above, the existing street pattern should be extended onto the site;**
- c. **Characteristics of the site, adjacent sites, and vicinity, such as: (1) Terrain; (2) Whether adjacent sites may be further divided; (3) The location of existing streets and pedestrian connections; (4) Whether narrow frontages will constrain creation of a through street or pedestrian connection; (5) Whether environmental overlay zones interrupt the expected path of a through street or pedestrian connection; and (6) Whether existing dwelling units on- or off-site obstruct the expected path of a through street or pedestrian connection. Alternative locations or designs of rights-of-way should be considered that avoid existing dwelling units. However, provision of through streets or pedestrian connections should take precedence over protection of existing dwelling units where the surrounding transportation system will be significantly affected if a new through street or pedestrian connection is not created;**
- d. **Master street plans for the area identified in Goal 11B of the Comprehensive Plan;**
- e. **Pedestrian connections should take the most direct route practicable. Users should be able to see the ending of the connection from the entrance point, if possible.**

Findings: The site is located between SE 122nd Ave and SE 128th Ave which have a distance between them of approximately 1,400 feet. There are no other north/south through streets between these two streets. If the distance between these existing streets is evaluated against the optimum spacing requirement of 530 feet, one can conclude that there should be an north-south through street provided in the vicinity of the site.

The site contains sufficient width to allow the creation of a public north-south through street. However, the properties adjacent to the portion of the site where the street would terminate are already developed, and not configured in a manner that would easily allow the further extension of a street from the site. So, although the optimum spacing criteria would indicate the need for an north-south through street or pedestrian connection at this site, there is no practicable opportunity to provide them in this land division.

The site is within the Portland Master Street Plan for the Far Southeast District, this plan does not show a through street at this location. Therefore, the proposal is consistent with the master street plan.

The only new through pedestrian connections included in the proposal are new sidewalks along the frontage of the site along SE Harold Street. This is a straight-line connection on which users will be able to see the ending of the pedestrian route from the entrance.

For the reasons described above, this criterion is met.

Utility Location, Extension of Streets, Partial Rights of Way

33.654.130 Additional Approval Criteria for Rights-of-Way

A. Utilities. Utilities must be located within rights-of-way or utility easements that are adjacent to rights-of-way to the maximum extent practicable. Utility easements up to 15 feet in width may be required adjacent to rights-of-way.

Findings: Utilities are defined in the Zoning Code as telephone, cable, natural gas, electric, and telecommunication facilities. Any easements that may be needed for private utilities that cannot be accommodated within the right-of-way can be provided on the final plat. At this time no specific utility easements adjacent to the right-of-way have been identified as being necessary. Therefore, this criterion is met.

DEVELOPMENT STANDARDS

General Information about Development Standards and Approval Criteria. The Zoning Code contains two types of regulations: Development standards and Approval criteria.

Approval criteria, such as those listed earlier in this report, are administered through a land use review process. Approval criteria are regulations where the decision-maker must exercise discretion to determine if the regulation is met. Public notice is provided and public comments received that address the approval criteria are addressed in the decision.

Development Standards: Development standards are clear and objective regulations (for example: building setbacks; number of required parking spaces; and maximum floor area). Compliance with development standards is reviewed as part of the administrative permitting process and are not considered to be discretionary reviews. Development standards that are not relevant to the land division review, have not been addressed in the review, but will have to be met at the time that each of the proposed lots is developed.

Among the various development standards that will be applicable to this lot, the applicant should take note of:

- Narrow Lots-- development on Parcel 1 will be subject to the following standards at the time of development permitting:
 - Height of the structures will be limited to 1.2 times the width of the structure, per 33.110.215.B.2; and
 - Garages can be no wider than 50% of the width of the front façade of the house, per 33.110.250.E.4.c (1)

Existing development that will remain after the land division. The existing development on the site will remain and be located on Parcel 2. The division of the property may not cause the structures to move out of conformance or further out of conformance to any development standard applicable in the R5a zone (Please see section on Other Technical Standards for Building Code standards.)

In this case, there are several Zoning Code standards that relate to existing development on the site:

- Minimum Setbacks – The existing house identified to remain on the site must meet the required Zoning Code setbacks from the proposed new lot lines. Alternatively, existing buildings must be set back from the new lot lines in conformance with an approved Adjustment or other Land Use Review decision that specifically approves alternative setbacks. The existing house will be 5 feet from the new property line. Therefore, the required setbacks are being met. To ensure this standard continues to be met at the final plat stage, the final plat must be accompanied by a supplemental survey showing the location of the existing building relative to the adjacent new lot lines.
- Accessory Structures – In this zone, accessory structures are not allowed on a lot without a primary structure. Therefore, in order for the proposed new lots to meet this standard, all accessory structures on Parcel 1 must be removed prior to final plat. Demolition permits are required. The applicant must provide documentation prior to final plat approval that all required demolition permits have received final inspection. To ensure that this standard is met, a condition of approval is necessary.
- Required Off-Street Parking - A paved parking pad/garage provides parking for the existing house on Parcel 2. As a result of this land division, the parking space for the existing house will be located on a different lot, and will no longer be available to Lot 2. The Portland Zoning Code does not require off-street parking on sites that are less than 500 feet from a transit street with 20-minute peak-hour bus, streetcar, or light rail service. Tri-Met provides transit service approximately 250 feet from the site on SE Harold St. via bus number 10. Bus number 10 provides peak-hour service meeting this requirement. As a result, no replacement parking is required for Parcel 2.

With the conditions noted above, this land division proposal can meet the requirements of 33.700.015.

OTHER TECHNICAL REQUIREMENTS

Technical decisions have been made as part of this review process. These decisions have been made based on other City Titles, adopted technical manuals, and the technical

expertise of appropriate service agencies. These related technical decisions are not considered land use actions. If future technical decisions result in changes that bring the project out of conformance with this land use decision, a new land use review may be required. The following is a summary of technical service standards applicable to this preliminary partition proposal.

Bureau	Code Authority	Topic	Contact Information
Water Works	Title 21	Water availability	503-823-7404 http://www.water.ci.portland.or.us/
Environmental Services	Title 17; 2002 Stormwater Manual	Sewer availability Stormwater Management	503-823-7740 http://www.bes.ci.portland.or.us/
Fire Bureau	Title 31 Policy B-1	Emergency Access	503-823-3700 http://www.fire.ci.portland.or.us/
Transportation	Title 17, Transportation System Plan	Design of public street	503-823-5185 http://www.trans.ci.portland.or.us/
Development Services	Titles 24 -27, Admin Rules for Private Rights of Way	Building Code, Erosion Control, Flood plain, Site Development & Private Streets	503-823-7300 http://www.bds.ci.portland.or.us.

As authorized in Section 33.800.070 of the Zoning Code conditions of approval related to these technical standards have been included in the Administrative Decision on this proposal.

CONCLUSIONS

The applicant has proposed a 2-lot partition, as shown on the attached preliminary plan (Exhibit C-1). As discussed in this report, the relevant standards and approval criteria have been met, or can be met with conditions. The primary issues identified with this proposal are: public street frontage improvements, demolition of the detached garage on lot 1 and decommissioning of the cesspool associated with the existing house.

With conditions of approval that address these requirements this proposal can be approved.

ADMINISTRATIVE DECISION

Approval of a Preliminary Plan for a 2-lot partition, that will result in one standard lot and one narrow lot as illustrated with Exhibit C-1, subject to the following conditions:

A. Supplemental Plan. Three copies of an additional supplemental plan shall be submitted with the final plat survey. That plan must portray how the conditions of approval listed below are met. In addition, the supplemental plan must show the surveyed location of the following:

- Any buildings or accessory structures on the site at the time of the final plat application;
- Any driveways and off-street vehicle parking areas on the site at the time of the final plat application;
- Any other information specifically noted in the conditions listed below.

B. The final plat must show the following:

1. The applicant shall meet the street dedication requirements of the City Engineer for SE Harold St. The required right-of-way dedication must be shown on the final plat.

C. The following must occur prior to Final Plat approval:**Streets**

1. The applicant shall meet the requirements of the City Engineer for right of way improvements along the frontage of SE Harold St. The applicant shall provide plans and financial assurances to the satisfaction of the Bureau of Transportation Engineering and Development Review and the Bureau of Environmental Services for required street frontage improvements.

Utilities

2. The applicant shall meet the requirements of the Site Development Section of the Bureau of Development Services for the decommissioning of the existing sanitary sewer system on the site.
3. The applicant shall meet the requirements of the Water Bureau concerning relocation of the water service connection to the existing home.
4. If required, due to the location of some of the elements within the frontage improvements required under condition C.1 above, the applicant shall meet the requirements of the Water Bureau for providing plans and financial assurances for the water main relocation in SE Harold St.

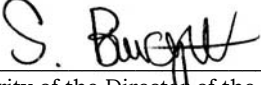

Existing Development

5. The applicant must obtain a finalized demolition permit for removing the garage/carport on Parcel 1. Alternately, the applicant can execute a covenant with the City stating that the structures will be removed if a primary structure has not received final inspection on the lot(s) with the accessory structure(s) within two years of final plat approval. The covenant must be recorded with Multnomah County prior to final plat approval.
6. The applicant must meet the requirements of Site Development for the stormwater systems on the existing house to remain on Parcel 2. The downspouts of the existing house are directed to the ground and to splash blocks. Because the house has a basement, stormwater must be collected or otherwise comply with the Stormwater Manual. Prior to final plat approval, the applicant must demonstrate that the existing house complies with the Stormwater Management Manual. If a stormwater retrofit is required, then final approval of a plumbing permit will be required prior to final plat approval. If modifications to the system are required by Site Development, the applicant must obtain finalized plumbing permits for this work prior to final plat approval.

D. The following conditions are applicable to site preparation and the development of individual lots:

1. A minimum of 15 feet of uninterrupted curb space must be preserved along the frontage of Parcel 1 or Parcel 2.

Decision rendered by:  **on April 1, 2009**
By authority of the Director of the Bureau of Development Services

Decision mailed April 3, 2009

About this Decision. This land use decision is **not a permit** for development. A Final Plat must be completed and recorded before the proposed lots can be sold or developed. Permits may be required prior to any work. Contact the Development Services Center at 503-823-7310 for information about permits.

Procedural Information. The application for this land use review was submitted on June 19, 2008, and was determined to be complete on July 10, 2008.

Zoning Code Section 33.700.080 states that Land Use Review applications are reviewed under the regulations in effect at the time the application was submitted, provided that the application is complete at the time of submittal, or complete within 180 days. Therefore this application was reviewed against the Zoning Code in effect on June 19, 2008.

ORS 227.178 states the City must issue a final decision on Land Use Review applications within 120-days of the application being deemed complete. The 120-day review period may be waived or extended at the request of the applicant. In this case, the applicant waived the 120-day review period, as stated with Exhibit A-2.

Some of the information contained in this report was provided by the applicant.

As required by Section 33.800.060 of the Portland Zoning Code, the burden of proof is on the applicant to show that the approval criteria are met. The Bureau of Development Services has independently reviewed the information submitted by the applicant and has included this information only where the Bureau of Development Services has determined the information satisfactorily demonstrates compliance with the applicable approval criteria. This report is the decision of the Bureau of Development Services with input from other City and public agencies.

Conditions of Approval. If approved, this project may be subject to a number of specific conditions, listed above. Compliance with the applicable conditions of approval must be documented in all related permit applications. Plans and drawings submitted during the permitting process must illustrate how applicable conditions of approval are met. Any project elements that are specifically required by conditions of approval must be shown on the plans, and labeled as such.

These conditions of approval run with the land, unless modified by future land use reviews. As used in the conditions, the term "applicant" includes the applicant for this land use review, any person undertaking development pursuant to this land use review, the proprietor of the use or development approved by this land use review, and the current owner and future owners of the property subject to this land use review.

This decision, and any conditions associated with it, is final. It may be appealed to the Oregon Land Use Board of Appeals (LUBA), within 21 days of the date the decision is mailed, as specified in the Oregon Revised Statute (ORS) 197.830. Among other things, ORS 197.830 requires that a petitioner at LUBA must have submitted written testimony during the comment period for this land use review. You may call LUBA at 1-503-373-1265 for further information on filing an appeal.

The file and all evidence on this case is available for your review by appointment. Please contact the receptionist at 503-823-7967 to schedule an appointment. Copies of all information in the file can be obtained for a fee equal to the cost for such services. You may also find additional information about the City of Portland and City Bureaus, as well as a

digital copy of the Portland Zoning Code, by visiting the City's homepage on the Internet at www.portlandonline.com.

Recording the land division. The final land division plat **must** be submitted to the City **within three years** of the date of the City's final approval of the preliminary plan. This final plat must be recorded with the County Recorder and Assessors Office after it is signed by the Planning Director or delegate, the City Engineer, and the City Land Use Hearings Officer, and approved by the County Surveyor. **The approved preliminary plan will expire unless a final plat is submitted within three years of the date of the City's approval of the preliminary plan.**
