**CODE  
GUIDE**

**Chapter 7: Cured-In-Place Piping (CIPP) Installed in Private Sewer Piping Under  
or Within an Existing Residential or Commercial Building Envelope -- OPSC/7/#4**

**Rescinded**  
October 6, 2016

**Reason for rescindment:** This code guide created a policy consistent with a decision by the Oregon State Plumbing Board of Appeals in 2014. It allowed cured-in-place thermosetting resin conduit liner (CIPP) to be placed in existing private sewer piping in lieu of replacing piping in certain circumstances as a means of sewer repair. CIPP has since become a listed material for replacement of building sewers and consequently is now allowed by the Oregon Plumbing Specialty Code.
