Loose Fill Insulation on Sloped Ceilings - CABO/E4/#1

Rescinded
January 15, 2015

Reason for rescindment: This code guide was developed in 1996 and stated that loose fill insulation may not be used in sloping ceilings. Since that time, the Oregon Revised Structural Code (ORSC), Section 1104.2, has established that loose fill insulation is allowed when installed per manufacturer instructions.
