Acronyms and Abbreviations	vii
Chapter	
1 Introduction	1-1
What Is the <i>Framework</i> ?	1-1
Origins of the Framework.....	1-2
A Backdrop of Land and Water	1-4
A Vision for Healthy Watersheds.....	1-5
Healthy Watersheds in an Urban Context.....	1-6
Portland’s Watershed Health Goals	1-7
Measuring Success.....	1-8
Salmon as Key Indicators of Watershed Health.....	1-9
How Is This Watershed Approach Different?.....	1-10
Why Take an Integrated Approach to Achieving Healthy Watersheds?.....	1-11
Relationship of the <i>Framework</i> to Other City Plans and Activities.....	1-12
Portland Within the Region: What We Do Matters.....	1-13
2 Scientific Foundation	2-1
The Importance of a Scientific Foundation.....	2-1
Scientific Uncertainty and Adaptive Management	2-2
Components of the Scientific Foundation	2-3
Primary Ecological Principles	2-4
Riverine, Wetland and Upland Ecology Principles	2-16
Salmonid Ecology Principles.....	2-30
Restoration Guidelines.....	2-38
3 Managing Portland’s Watersheds	3-1
Overview	3-1
Developing and Implementing Watershed Management Plans	3-5
Planning: Identifying Goals, Issues and Coordination Strategies	3-5
Characterization: Determining Watershed Conditions.....	3-7
Solutions: Establishing Objectives, Targets and Benchmarks and Identifying Actions to Achieve Them.....	3-14
Results: Implementing and Monitoring Watershed Projects and Actions	3-34
Ensuring That City Actions Are Compatible with Watershed Health Goals.....	3-39
Beyond Watershed Management Plans: Additional Guidance	3-40
Identification of CIP Projects.....	3-40
Compatibility Process for Major New and Ongoing Projects	3-41
Program Assessment: Compatibility of All City Programs with Watershed Health Goals.....	3-42

		Page
4	Ongoing Elements of Watershed Management.....	4-1
	Addressing Uncertainties.....	4-1
	Delineating Elements of the <i>Framework</i>	4-2
	Developing Monitoring Programs.....	4-2
	Providing Appropriate Funding.....	4-2
	Involving Stakeholders and Others.....	4-2
	Providing Regional Coordination and Leadership.....	4-3
	Addressing the Tough Issues.....	4-3

Appendixes

- A River Renaissance Visions and Strategies
- B Regulations Protecting Watershed and River Health
- C Existing City Activities the *Framework* Builds Upon
- D Regional Coordination and Integration
- E The City’s Natural Environment
- F Setting Viable Salmonid Population Goals
- G Selecting Indicators of Watershed Health
- H Technical Methods and Analytical Tools

Glossary

Literature Cited

Tables

2-1	Principles and Guidelines Underlying the City of Portland’s Scientific Foundation...	2-3
3-1	Watershed Health Attributes and Some of the Landscape and Human Influences That Affect Them.....	3-9
3-2	Components and Sample Details for Identifying Watershed Problems or Assets and Their Causes, Sources and Effects.....	3-14
3-3	Sample “Word Template” for Refining Watershed-Specific Objectives.....	3-17
3-4	Examples of Possible Watershed Actions or Projects, Organized by General Category and Type.....	3-27
3-5	Relative Weightings of Restoration Elements, in Alignment with Restoration Guidelines.....	3-29
3-6	Examples of Types of Monitoring (by Purpose) Being Conducted by the City of Portland.....	3-39
B-1	Matrix of Major City Programs or Activities and Relevant Federal Regulations.....	B-4
B-2	ESA Status of Key Salmonid Species Found in the Vicinity of the City of Portland...	B-6
B-3	TMDL and Load Allocation Development for Water Quality-Limited Waterways in and around Portland.....	B-15

E-1 Priority Wildlife Habitats in Portland and Reasons for High Importance.....	E-26
E-2 Priority Wildlife Species in Portland and Reasons for High Importance.....	E-28
G-1 Factors That Influence Watershed Conditions.....	G-5
G-2 Hydrology Indicators and Metrics.....	G-9
G-3 Physical Habitat Indicators and Metrics.....	G-14
G-4 Water Quality Indicators and Metrics.....	G-18
G-5 Biological Communities Indicators and Metrics.....	G-22
G-6 Links Between Potential Watershed Health Indicators and Key Watershed Functions.....	G-24
G-7 Indicators and Metrics of Human Influences.....	G-29
H-1 Examples of Types of Monitoring (by Purpose) Being Conducted by the City of Portland.....	H-2
H-2 Connections Between EDT Attributes and the <i>Framework</i> Indicators.....	H-8
H-3 Net Environmental Benefits Analysis Comparing Benefits and Costs under Two Hypothetical Scenarios.....	H-16

Figures

1-1 City of Portland Watersheds	1-2
2-1 The Three Spatial Dimensions of Landscapes: Longitudinal, Vertical and Lateral	2-21
2-2 Changes in Hydrologic Flows with Increasing Impervious Surface Cover in Urbanizing Catchments	2-25
3-1 Stages and Steps in the Watershed Management Process.....	3-3
3-2 Cause-Effect Relationships for a Sample Problem and a Sample Asset.....	3-13
3-3 The Use of Reference Conditions, Target Values and Benchmarks.....	3-22
3-4 Hypothetical Example of Evaluation Factors and Their Relative Weightings for Use in Comparing Different Alternatives.....	3-31
B-1 Portland-Area Salmonid ESUs Listed Under the Federal ESA.....	B-7
E-1 City of Portland Watersheds.....	E-2
E-2 Distribution of Chinook and Coho Salmon in Portland's Waterways.....	E-21
E-3 Distribution of Steelhead and Cutthroat Trout in Portland's Waterways.....	E-23
H-1 Sample Comparison of Salmon Survival Under Existing Conditions in a Stream and Under Reference Conditions.....	H-12
H-2 Schematic Representation of Preservation and Restoration Values.....	H-13
H-3 Preservation and Restoration Values for Johnson Creek Stream Reaches (for Fall Chinook).....	H-13
H-4 Factors Affecting the Survival and Capacity of Coho in a Sample Reach of Johnson Creek.....	H-14
H-5 Sample HEA Comparison of Two Hypothetical Scenarios.....	H-15
H-6 Graphical Comparison of Potential Action Scenarios.....	H-17
