

## SW Terwilliger Boulevard Sewer Project

# Why close SW Terwilliger Boulevard to motor vehicles?

Trail still open to bikes and pedestrians.

Example of open trench pipe repair in a neighborhood

### Equipment and Materials Staging:

This project will require large machinery working on a street with no shoulders. Closing the street gives work crews a staging site near the work area.

Staging on-site saves time and reduces project costs.

### Why not leave one lane open?

- To move traffic through the work area in a single lane, flaggers would need to work 24 hours a day, which is cost prohibitive.
- There would be no safe spot for vehicles to turn around if traffic backs up.
- The narrow road and curves obscure line of sight. Traffic lane restrictions would put workers and the public in danger, especially at night.

### Sewer Construction:

The contractor will install the sewer in the center of the road, which doesn't leave enough space to safely move traffic through the work area.

### Why will the upper portion of Terwilliger remain open?

- People who live on SW Northgate Avenue, SW Powers Court and SW Castleridge Lane can only access their properties from SW Terwilliger Boulevard.
- Tryon Creek State Park needs access to the Iron Mountain Trailhead on SW Terwilliger Boulevard to retain public access to trails, bike paths, and activities.
