South Portland-Burlingame Sewer Repair Project DESIGN UPDATE – NIGHT WORK PROPOSED

OCTOBER 1, 2018

CONTACT: Joe Tursi, 503-823-5753, Joe.Tursi@portlandoregon.gov

Environmental Services, your sewer and stormwater utility, is designing projects in the South Portland and South Burlingame neighborhoods to repair or replace 10,800 feet, or 2 miles, of public sewer pipes that are on average 90 years old and deteriorating due to age. The South Portland-Burlingame Sewer Repair Project will help protect public health, water quality, and the environment by reducing the possibility of sewage releases to homes, businesses, and streets.

Schedule

Construction is anticipated to begin in the August 2019 and take up to a year to complete.

Night Work Proposed

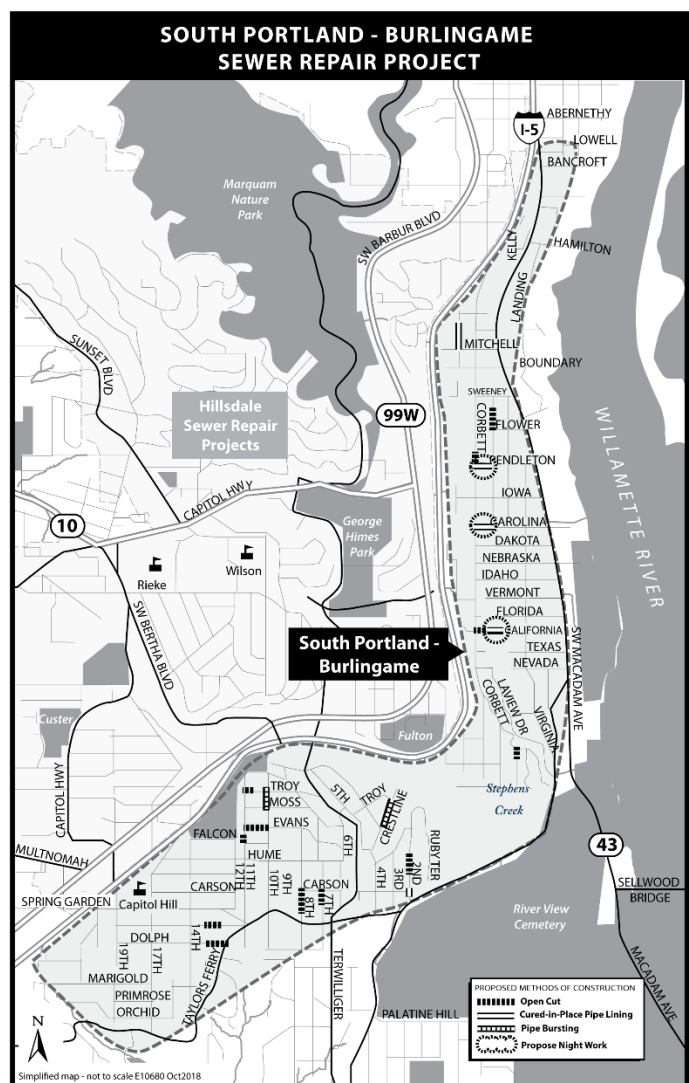

Engineers have identified multiple locations that will likely require night work (see map). Due to the length and diameter of a few pipes, and traffic safety reasons, some of the work will extend a few hours beyond 6:00 p.m. or will need to be done overnight. Equipment that generates noise will include sewer cleaning trucks, compressors, light trucks, generators, pumps, and ventilation fans. Night work will require lighting of the work zone.

Submit Comments to Portland Noise Office

Work after 6:00 p.m. and before 7:00 a.m. and all hours on Sundays requires a noise variance from the Portland Noise Office. Environmental Services will apply for a noise variance to enable the city's contractors to work both days and nights in certain locations.

Your comments regarding the proposed schedule to work both days and nights are valuable, and you can submit them to the Portland Noise Office by letter, email, or telephone. Please submit comments by **Friday, November 16** to:

Portland Noise Office, 1221 SW 4th Avenue, Suite 110, Portland, OR 97204
Email: noise@portlandoregon.gov
Phone: 503-823-7350

ENVIRONMENTAL SERVICES
CITY OF PORTLAND
working for clean rivers

Over one-third of Portland's 2,500 miles of sewer pipes are more than 80 years old. Projects to replace or repair aging sewers are important for protecting water quality, public health, and the environment. Learn more at www.portlandoregon.gov/bes.

Location

The updated project map shows where work will occur and what type of construction method will be used at each location. The project area is generally bounded by SW Bancroft Street to the north, I-5 to the north west, Taylors Ferry Road to the south, and SW Macadam Avenue to the east.

Construction Methods

This project will include both trenchless and trench excavation methods:

- **Open Trench Pipe Repair:** The contractor digs a trench, installs a new pipe, fills in the trench, and restores the street to its previous condition.
- **Pipe Lining (CIPP):** Through a manhole, the contractor inserts a flexible liner into the existing pipe. The liner hardens to seal cracks and form a new smooth pipe.
- **Pipe Bursting:** The contractor pushes a bursting head into the sewer line to break apart the existing pipe while pulling a new pipe into place behind it.

For more details and photos of construction methods visit: www.portlandoregon.gov/bes/methods.

Tell us more...

To help us design a successful project, please plan to attend the meeting below for project updates and a chance to talk with members of the project team.

BURLINGAME NEIGHBORHOOD ASSOCIATION

Thursday, October 11 at 7:00 p.m.

Location: Capitol Hill Elementary Auditorium, 8401 SW 17th Ave, Portland, OR 97219
