BRIEFING BOOK

PORTLAND CENTRAL CITY REAL ESTATE MARKET TRENDS

Johnson Gardner was retained by the PORTLAND DEVELOPMENT COMMISSION to prepare an overview of recent real estate market trends in the Portland metropolitan area's Central City. This report is segmented into a broad overview of economic trends, as well as an overview by major land use type. Following this overview is data regarding market conditions and trends by land use, segmented by the boundaries outlined in the map to the right.

As shown, the Central City study area has been broken out into twelve submarkets. While market data will be presented for these markets on a disaggregated basis, these markets cross compete to a significant extent, and cannot be considered solely on an independent basis.

I. MACROECONOMIC OVERVIEW

The national economy expanded at a 2.2% rate in the third quarter of 2006, indicating that the national economy continues to expand but at a somewhat slower rate.

The national economy is expected to continue to expand, but at a rate below what was recorded during the last few years. Interest rates are likely to remain stable, with some potential for rate reductions from the Fed. The impact of the recent fade in the national housing market appears to be significant, but not enough to push the economy into a recession. Drops in residential investment were offset to some extent by non-residential investment.

NATIONAL ECONOMY AT A GLANCE: THIRD QUARTER OF 2006

		<u>3Q06</u>		<u>2Q06</u>	
G.D.P.	↑	2.2%	↑	2.6%	
<i>Components</i>					<i>Highlights</i>
<i>Consumer Expenditure</i>	↑	2.0%	↑	4.1%	Consumer expenditures dropped across the board as confidence dropped.
<i>Private Investment</i>	↓	0.0%	↑	5.3%	A drop in residential investment offset modest gains in non-residential investment
<i>Government Expenditure</i>	↑	0.4%	↑	2.9%	National defense spending dropped slightly while state and local expenditures rose.
<i>Exports</i>	↑	0.7%	↑	2.5%	The drop in the dollar has not substantively increased exports, although import levels have dropped.
<i>Imports</i>	↑	-0.9%	↑	2.4%	

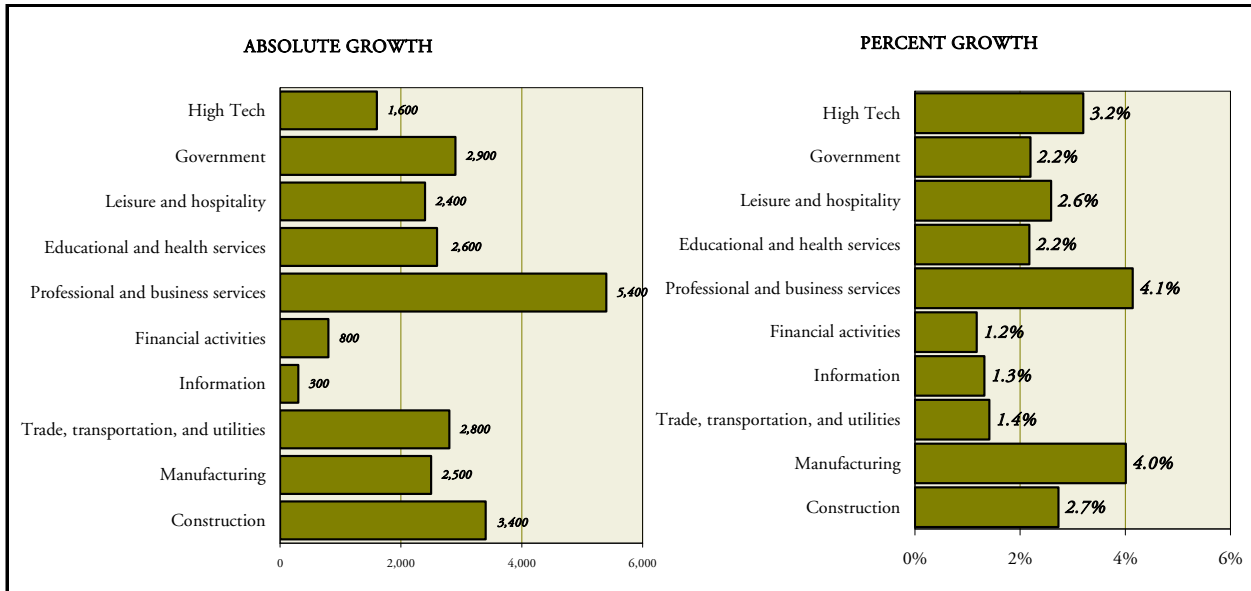

We continue to feel that potential adjustments in housing market pricing will have a substantial impact on consumer expenditures. JOHNSON GARDNER expects that economic activity will remain near 3.0% in 2007.

Portland-Vancouver Metropolitan Area

The local economy continued to realize substantial employment growth throughout the third quarter, while the year to year rate of increase has dropped to about 22,000 jobs relative to the third quarter in 2005. The drop in employment from the previous quarter, totaling 700 jobs, is also substantial below historic variations for the second and third quarters.

Year-over employment gains during the last quarter were widespread, with all major industrial sectors reporting growth. In terms of the magnitude of growth, Professional and Business Services (5,400 jobs), Construction (3,400 jobs), Government (2,900 jobs), and Trade, Transportation, and Utilities (2,800 jobs) led the way. In terms of rate of growth, Professional and Business Services (4.1%), Manufacturing (4.07%) and High Tech (3.2%) grew the fastest.

Population & Residential Permitting

While population growth was maintained during the recent economic decline in the Portland metropolitan area, the strong continued employment growth is a welcome sign that the level of growth can be maintained. Population growth has ranged from 1.0% to 2.7% for the last decade; averaging 1.8%, a pace we expect to continue. Employment growth is expected to remain around 2.5% through 2007, slowing to below 2.0% in the years following. The local unemployment rate has dropped significantly, and is now close to the national average.

Continued population growth allowed for a continued strong level of residential construction activity. While single-family permit levels declined from 8,775 to 7,510 through September from the previous year, multifamily permits increased sharply from 3,146 to 4,055. Overall, permit activity has been similar to the previous year with levels declining slightly from 11,921 to 11,565.

* 2006 permit activity annualized based on activity through September

II. RENTAL APARTMENT MARKET

Portland-Vancouver PMSA

This section summarizes trends in the Portland-Vancouver metropolitan area's rental apartment market, as well as our forecast of demand for the next twelve months. The focus of this report is on market-rate developments, and the inventory reflects a comprehensive inventory of market-rate rental apartment projects of 15 or more units.

The Portland metropolitan area's rental apartment strengthened significantly during the third quarter, with overall occupancy rising to 95.9% from 94.0% in the second quarter of 2006. The high cost of residential property, along with increasing employment levels and overall lack of new rental product has pushed occupancy levels up dramatically from a recent low of 91.9% in 2003. In addition, the ongoing conversion of rental apartment units to condominiums, particularly in Downtown Portland continues to constrict supply. These conditions have allowed for rapid rent escalation in many markets, as well as a sharp reduction in concessions.

RENTAL APARTMENT MARKET TRENDS / MARKET-RATE UNITS

SOURCE: Johnson Gardner

We estimate that current occupancy rates range between 94.7% and 96.9% at the submarket level, with the highest occupancy levels in the Close-In Eastside and the Central City. After a few years of softness, the Central City market is enjoying substantial pricing power, with projects reported significant escalations in 2006.

The investment market appears to be appreciating the upside appreciation in rental apartments, with cap rates remaining very low. We expect fundamentals to improve, but an upward shift in cap rates could easily erase any increase in associated value.

Projections

Over the next year, we forecast that demand will continue to exceed new supply. The overall occupancy rate is projected to climb to 96.7% by the end of the third quarter of 2007, with all major subregions averaging over 95% occupancy. The following table summarizes current and projected market conditions by major subregion in the metropolitan area:

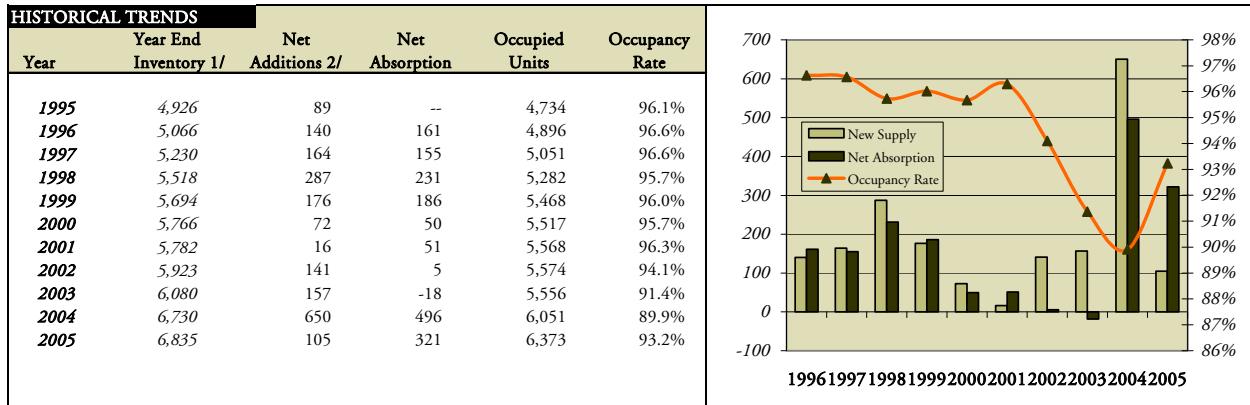

CURRENT AND PROJECTED MARKET CONDITIONS

Submarket	1Q06		New Supply	Net Absorption	1Q07	
	Inventory	Occupancy			Inventory	Occupancy
<i>Beaverton/Aloha</i>	18,021	95.3%	416	491	18,437	95.8%
<i>Hillsboro/Tanasbourne</i>	15,332	96.2%	335	534	15,667	97.5%
<i>Tigard/Tualatin/Wilsonville</i>	13,297	95.2%	108	280	13,405	96.5%
<i>Sunnyside/Clackamas</i>	5,303	96.5%	369	305	5,672	95.6%
<i>Lake Oswego/West Linn</i>	4,921	94.7%	197	193	5,118	94.8%
<i>Oregon City/Gladstone</i>	7,237	95.1%	15	123	7,252	96.6%
<i>Gresham/Troutdale</i>	21,294	96.8%	488	648	21,782	97.6%
<i>Close-In Westside</i>	11,152	95.2%	88	228	11,240	96.5%
<i>Close-In Eastside</i>	11,905	96.9%	160	259	12,065	97.8%
<i>Central City</i>	6,835	96.6%	297	237	7,132	95.9%
<i>Clark County</i>	21,269	95.5%	538	732	21,807	96.5%
Metro Area Total	136,566	95.9%	3,011	4,029	139,577	96.7%

Central City Subregion

With a net decline of units to the market due to continued condominium conversion, the occupancy in the Central City subregion rose substantially from 93.3% in the first quarter of 2005 to 96.6% in the first quarter of 2006. That trend continued through 2006 as occupancy continued to rise to 98.7% in the third quarter before dropping slightly in the fourth to its current level of 97.9%. Despite vacancy increasing from a low of 1.3%, the current increase to 2.1% is consistent with seasonal fluctuations and remains significantly below the high of 10.1% seen in 2004, as well as the current metropolitan average of 4.0%.

With occupancy levels now extremely high, significant upward pressure has been placed on Central City rents, now averaging approximately \$1.30 for all multifamily product, with units built since 1986 receiving an average per-foot pricing premium of 28.3% over seasoned rental units.

SOURCE: Norris Beggs & Simpson and Johnson Gardner

With high occupancy and rising rents, market-rate apartment construction is scheduled to resume, resulting in relief for the supply-constrained Central City rental market. While some new supply will come online in 2007, it will not keep pace with demand and rents will continue to increase for the foreseeable future as occupancy levels take a temporary dip.

III. RESIDENTIAL OWNERSHIP MARKET

Portland-Vancouver PMSA

This section summarizes trends in the ownership residential market at a subregional market level, as well as our forecast of demand¹ by subregion for the next twelve months. The Portland-Vancouver metropolitan area has been divided into fifteen geographic subregions for analysis.²

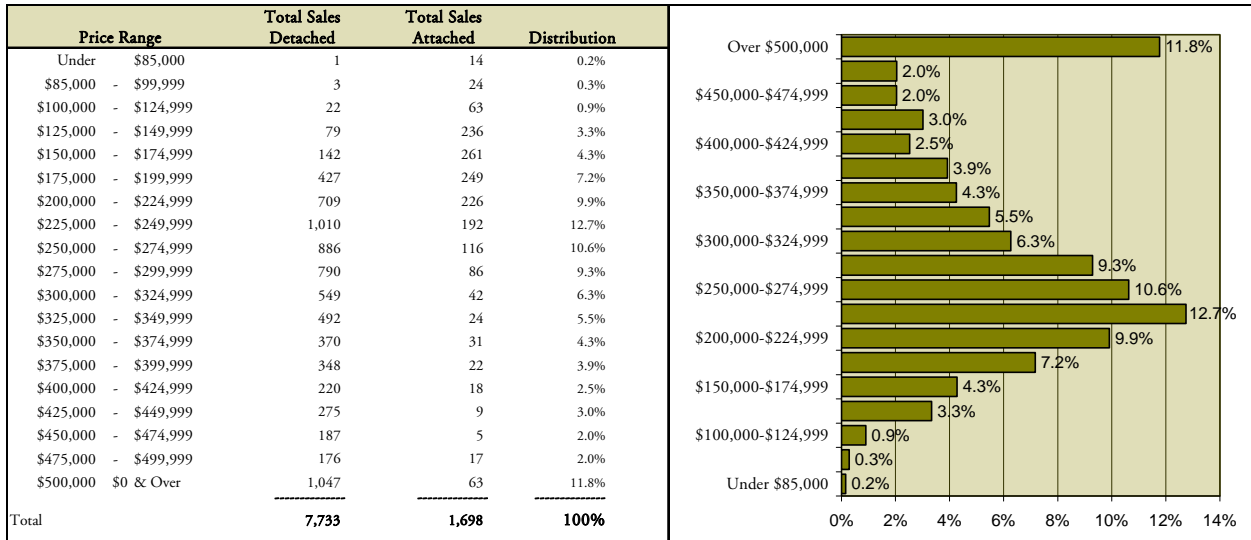

Market Trends

Sales activity dropped sharply during the third quarter, with sales of detached homes dropping 23% from third quarter 2005 levels. The pace of sales was still substantial though, as the 2005 levels were record highs. Attached housing sales remained steady, as this type of housing remains the only option for new construction to reach the bulk of the market in terms of achievable home pricing. As shown in the following table and chart, which summarize housing sales over the last quarter for the metro area, homes priced below \$300,000 remains the greatest portion of the market.

Total Sales Volume			
	Detached	Attached	Total
3rd Quarter-06	7,733	1,698	9,431
2nd Quarter-06	8,738	1,774	10,512
1st Quarter-06	6,598	1,290	7,888
4th Quarter-05	10,132	1,654	11,786
3rd Quarter-05	10,047	1,692	11,739
2nd Quarter-05	7,039	1,167	8,206
1st Quarter-05	7,991	1,214	9,205
Annual Percent Increase (Decrease)	-23.0%	0.4%	-19.7%
Average Sales Price -- New Construction			
	Detached	Attached	Attached/ Detached
WESTSIDE			
NEW	\$564,995	\$322,827	57.1%
ALL SALES	\$493,988	\$275,586	55.8%
EASTSIDE			
NEW	\$448,638	\$255,878	57.0%
ALL SALES	\$338,136	\$210,894	62.4%
CLARK COUNTY			
NEW	\$411,045	\$246,061	59.9%
ALL SALES	\$285,285	\$213,624	74.9%

¹ Johnson Gardner's demand model focuses on predicting *actual* demand in each of the subregions, as opposed to *potential* demand. Actual demand forecasts are based on a series of indicators, including past-recorded sales in the subregion. Potential demand refers to the possibility of future sales in areas where past sales are either non-existent or poor predictors of the future. The Johnson Gardner model only attempts to forecast actual future demand.

² The data presented in this analysis primarily reflects Realtor data from the Realtor's Multiple Listing Service. While we consider this data source to be the most reliable available for the Portland-Vancouver metropolitan area, it does not include direct owner sales that do not utilize a Realtor. As a result, the data tends to understate market activity in attached for-sale products as well as in Clark County, which has a disproportionate level of direct sales.

The Portland metro area's standing residential inventory has increased sharply over the last year, and is almost double what it was 12 months ago.

The increase in inventory is primarily a function of increased listing activity, as sales volumes have remained solid.

The market has seen a significant number of condominium conversions in the last few years, which have reduced rental apartment supply while providing affordable ownership housing options at a price point that cannot be replicated in new construction. The overall rate of introduced condominium conversions was estimated to exceed 1,000 units in 2006.

Demand Forecast

A near-term demand analysis was prepared in order to determine the potential market depth for ownership housing in the Portland-Vancouver metropolitan area. The analysis is based on existing and projected demographics within the region, as well as observed construction and sales patterns. Regional demand is allocated to subregions based on historic patterns, permit data, and intra-metropolitan area trends. Demand was segmented into nineteen price categories. Overall net demand for ownership housing is projected to be 10,600 net new units over the next twelve months, reflecting a roughly 10% reduction from last quarter's forecast.

The following is a summary of current and projected demand in each of the for-sale residential subregions.

PROJECTED OWNERSHIP RESIDENTIAL DEMAND – 3Q06-2Q07

Geographic Subregion	Projected Net New Demand	Percent of Total	Demand by Price Range (\$ Thousands)					
			Under - \$125	\$125 - \$199	\$200 - \$299	\$300 - \$399	\$400 - \$499	Over \$500
Multnomah County

Central City Subregion

For the purpose of this section, the Central City residential market consists of the Northwest District, the Pearl, Old Town/Chinatown, Downtown, Goose Hollow, Homestead, Corbett/Terwilliger/Lair Hill, Hosford Abernathy, Buckman, Kerns, the Lloyd District, and Eliot. The following is a breakdown of recent housing trends for the above neighborhoods, followed by a breakdown of the Portland residential market by submarket.

Quarter/ Property Type	Total Sales	Average Size	Min Price	Max Price	Average Price	Price Per Sq. Ft.
2005 Fourth Quarter Sales						
Single-Family Detached (All Sales)	439	2,479	\$112,900	\$1,800,000	\$439,196	\$177
Single-Family Detached (New Construction)	4	3,414	\$339,000	\$1,565,000	\$922,250	\$270
Attached Housing (All Sales)	279	1,057	\$105,900	\$1,385,000	\$327,969	\$310
Attached Housing (New Construction)	40	1,225	\$165,000	\$1,385,000	\$423,178	\$345
2006 Fourth Quarter Sales						
Single-Family Detached (All Sales)	382	2,488	\$151,500	\$2,525,000	\$474,294	\$191
Single-Family Detached (New Construction)	18	1,998	\$240,000	\$1,495,000	\$493,628	\$247

Attached Housing (New Construction)	15.0%	11.4%	0.6%	28.5%	5.2%	-5.6%

SOURCE: RMLS & Johnson Gardner LLC

In the Fourth Quarter of 2006, the Central City residential market saw 663 total sales recorded on RMLS. 57.6% of these sales were for detached single-family homes, while the remaining were either condominiums or attached townhomes. These 663 sales averaged approximately \$414,000 for homes averaging 1,860 square feet, or \$222 per square foot. This is an increase of 8.2% for price per square foot from the fourth quarter in 2005, compared to an only 4.5% increase in absolute price from the previous year. This is consistent with the increasing shifts towards smaller attached housing with higher levels of finishes as the Central City market increasingly caters to young professionals and empty nesters.

Inner Westside Portland Detached Trends

Overall market activity for detached product in the Inner Westside Portland market area begins at \$150,000, continuing to well beyond \$1,000,000, with the majority of new construction units costing in excess of \$500,000 over the past quarter.³ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$725,000 in the third quarter of 2006, up from an average price of \$621,000 in the same quarter a year ago.

³ RMLS

Inner Westside Portland Attached Trends

Overall market activity for attached product in the Inner Westside Portland market area begins at \$125,000, continuing to well beyond \$1,000,000, with the majority of new construction units costing in excess of \$500,000 over the past quarter.⁴ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$684,000 in the third quarter of 2006, up from an average price of \$478,000 in the same quarter a year ago.

⁴ RMLS

North Portland Detached Trends

Overall market activity for attached product in the North Portland market area begins at \$125,000, continuing beyond \$500,000, with the majority of new construction and existing units costing between \$225,000 and \$250,000 over the past quarter.⁵ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$241,000 in the third quarter of 2006, down from an average price of \$280,000 in the same quarter a year ago when a few expensive units skewed the results significantly upwards. When existing sales are taken into account, the average sales price rose from \$237,000 to \$294,000 over the same timeframe.

⁵ RMLS

North Portland Attached Trends

Overall market activity for attached product in the North Portland market area begins at \$85,000, continuing to \$500,000, with the majority of new construction units costing between \$150,000 and \$300,000 over the past quarter.⁶ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$269,000 in the third quarter of 2006, up from an average price of \$233,000 in the same quarter a year ago. All attached sales averaged \$196,000 in the third quarter, down from \$240,000 the year prior. This fluctuation is primarily attributed to the small sample size and varying quality of units sold in the corresponding quarters.

⁶ RMLS

Northeast Portland Detached Trends

Overall market activity for detached product in Northeast Portland begins at \$85,000, continuing well beyond \$500,000, with the majority of new construction units costing between \$200,000 and \$350,000 over the past quarter.⁷ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$310,000 in the third quarter of 2006, up from an average price of \$295,000 in the same quarter a year ago. When resales are included, the average rises to \$365,000, up from \$324,000 a year earlier.

⁷ RMLS

Northeast Portland Attached Trends

Overall market activity for attached product in Northeast Portland begins at \$100,000, continuing to \$425,000, with the majority of new construction units costing between \$125,000 and \$200,000 over the past quarter.⁸ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$313,000 in the third quarter of 2006, up from an average price of \$198,000 in the same quarter a year ago, while existing sales averaged \$210,000.

⁸ RMLS

Southeast Portland Detached Trends

Overall market activity for detached product in Southeast Portland begins at \$100,000, continuing well beyond \$500,000, with the majority of new construction units costing between \$200,000 and \$375,000 over the past quarter.⁹ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$426,000 in the third quarter of 2006, up from an average price of \$360,000 in the same quarter a year ago. When resales are included, the average rises to \$334,000, up from \$314,000 a year earlier.

⁹ RMLS

Southeast Portland Attached Trends

Overall market activity for attached product in Northeast Portland begins at \$100,000, continuing to beyond \$500,000, with the majority of new construction units costing between \$150,000 and \$250,000 over the past quarter.¹⁰ In sales tracked by RMLS, the average price for newly constructed attached product was approximately \$268,000 in the third quarter of 2006, down from an average price of \$277,000 in the same quarter a year ago, while existing sales rose to \$269,000, up from \$230,000 a year earlier.

IV. SPECULATIVE OFFICE MARKET

Portland Vancouver PMSA

The Portland metropolitan area's speculative office market reported an increase in overall occupied office space during the third quarter of 2006 of just over 100,000 square feet, thought that was the lowest tightening of the past six quarters, though there was 160,000 square feet of new construction. The strong absorption and general tightening of the market suggest a continued positive future outlook. The direct vacancy rate and total vacancy including sublease space dropped over the past year from 12.1% to 10.3% and 13.2% to 11.1%, respectively.

¹⁰ RMLS

OFFICE MARKET SUMMARY, FIRST QUARTER 2006

	Speculative Inventory	New Construction	Inventory Adjustments	Net Absorption	Vacancy		Vacancy	
					Direct	Sublease	Direct	Total
BREAKOUT BY CLASS								
Class A	25,684,736	62,213	57,859	40,375	1,773,399	205,857	6.90%	7.60%
Class B	26,545,305	64,298	59,797	41,727	3,411,946	151,231	12.85%	13.15%
Class C	14,014,789	33,946	31,570	22,030	1,651,122	195,649	11.78%	13.00%
Total	66,244,830	160,457	149,226	104,132	6,836,466	552,737	10.32%	11.15%

NET ABSORPTION AND VACANCY RATE TRENDS

The direct vacancy rate for Class-A space is estimated at 6.9%, or 7.6% with sublease space included, a drop that is consistent with the overall market. Direct vacancy is estimated to have dropped to 12.9% and 11.8% for Class-B and Class-C space, continuing to reflect a move to quality in this buyer's market. An estimated 6.8 million square feet of tracked space is directly vacant, with 553,000 square feet of space identified for sublease. The amount of sublease space had declined consistently over past nine quarters before showing a slight up tick, but this is likely due to anomalies in the survey and not an actual increase in available sublease space. Both direct and total vacancies have been generally trending downward over the past four years.

SUBLEASE SPACE BY QUARTER

We are seeing vacancy rates below 10% in the I-5 South Corridor, the Sunset Corridor/Hillsboro, and the East Multnomah County subregions; as well as the Central City. The first two markets, along with Kruse Way/ Washington Square serve major executive housing concentrations, and have performed far better than the Portland CBD over the last decade. The strongest submarkets in terms of occupancy are Close-In Northeast (3.8%), the I-205 corridor in East Multnomah County (5.6%), and Kruse Way (6.2%).

Soft market conditions and low net lease rates are expected to limit new supply over the next year to 1,084,000 square feet, while demand is forecasted to exceed 2.3 million square feet. Our demand forecasts for office space are employment driven, and as a result do not factor in the marginal impact of soft market conditions and reduced effective lease rates. During periods of relatively high vacancy, aggressive leasing tactics have the ability to generate demand through reducing the effective cost of space to tenants. While this can lead to an increase in net absorption, it is important to recognize that the impact is temporary, and does not change the underlying demand for space if priced appropriately.

An estimation of demand and vacancy over the next two years has been completed for each office submarket in the Portland Metropolitan Region. This demand analysis takes into consideration regional differences and strengths, planned new supply, employment growth, and general regional and national economic trends. Over the next year, office demand is expected to increase consistent with expectations of continued economic growth. Overall vacancy rates are projected to fall to 9.0% by the end of the first quarter of 2007 and drop below 6.0% in the following year.

Central City Subregion

The Central City is the Prime location for office space in the Portland area. However, the recent economic downturn had left plenty of weakness in the market. The overall occupancy rate for the subregion has steadily risen for much of the past three years. Current occupancy when sublease is included is approximately 10.5%, down roughly 0.6 percentage points from the previous quarter and 2.8 from the same quarter, the previous year, reflecting improving conditions as the economy continues its recovery phase.

Broken down by building class, we discover demand in the subregion is greatest for Class A space with a direct vacancy of only 4.7% and a total vacancy of 6.0% when sublease is included. Direct vacancy is estimated at

12.9% and 11.8% for Class-B and Class-C space, respectively. Meanwhile, pricing trends are consistent with what would be expected for each building class. Class A space definitely commands a premium on the average, as space currently prices range from \$14.00 to \$40.00 per square foot. Class B space is available for between \$8.00 and 24.00 and class C space leases between \$7.50 and \$21.00.

Over the next 24-months we project a continuation in the strengthening of the local economy to provide greater increases to the local employment base, and in turn, creating new office demand.

V. SPECULATIVE INDUSTRIAL MARKET

Portland Vancouver PMSA

The local industrial market showed continued improvements in the third quarter of 2006, consistent with the expansion in the local economy. Net absorption was more than 800,000 square feet and was fairly widespread geographically in the metropolitan area with the strongest absorption in the Southwest. Absorption on the year is anticipated to near 4.8 million square feet. This quarter marked the sixth consecutive quarter of positive net absorption with total speculative vacancy dropping from 15.1% to under 10.0% during that time period. The overall occupancy rate for traditional industrial space is estimated at approximately 6.0%, down from 7.4% in the same quarter 2005. Vacancy was around 11.8% for speculative industrial and business parks; down from 14.2% in 2005. Rates in the flex market are significantly higher at approximately 17.5% overall, though that still represents the fourth consecutive quarter of increasing occupancy.

	Net Rentable S.F.	Available S.F.	Vacancy Rate	Quarterly Net Absorption	Net Absorption		
					2004	2005	2006 1/
<i>Northeast</i>	34,588,117	1,615,265	4.67%	346,544	308,060	1,124,078	1,385,889
<i>Northwest</i>	41,409,123	1,983,497	4.79%	-234,939	520,256	720,575	456,164
<i>Southeast</i>	28,597,853	2,001,850	7.00%	19,221	210,206	755,299	652,456

1/ Annualized through 3Q06

SOURCE: CB Richard Ellis

As with office space, the demand for industrial space is directly correlated with growth in industrial space using employment, and the rebound in this market is directly tied to the Portland metropolitan area's economic rebound.

The apparent strength of the market during the past two years may partially reflect aggressive leasing, as well as a substantial increase in the inventory of space surveyed, though it is likely that much of the increase in occupied space is employment driven.

New supply is expected to continue to be limited due to the limited supply of industrial land. We are forecasting that market conditions will continue to strengthen, but at a slowed pace through 2007.

Central City Subregion

The market for industrial space in the Central City tightened in 2006 with speculative vacancy dropping from 8.9% at the end of the first quarter to 8.1%, six months later at the end of the third quarter. Gains in the Central City industrial market were widespread with all seven submarkets seeing declines in speculative industrial vacancy. Swan Island/Hayden Island remains the tightest market at 4.4% vacancy, followed closely by the NW Industrial District (4.5%), and Guilds Lake (5.0%). The Central Business District remains the softest industrial market with vacancy estimated at 14.9%, followed closely by the Close-In Northeast/I-84 market (14.8%).

Quoted lease rates for flex space in the Central Westside ranged from \$13.00 to \$18.96 per year per square foot, on a net basis, averaging \$15.40. Traditional industrial space ranged from \$3.60 to \$9.00 per foot net, averaging \$5.34. The Central Business had the highest observed flex space rate at \$18.96 while Guilds Lake had the highest observed industrial rate at \$9.00. While Guilds Lake had the highest rate for industrial space by a small margin, average lease rates were slightly higher in the Close-In NW submarket at \$6.37 per square foot, versus a \$5.34 per foot average in Guilds Lake.

INDUSTRIAL LEASE RATE SUMMARY, 4TH QUARTER 2006 – CENTRAL WESTSIDE

SOURCE: LoopNet and Johnson Gardner LLC

Quoted lease rates for flex space in the Central Eastside ranged from \$5.10 to \$17.48 per year on a net per-foot basis, averaging \$12.09. Traditional industrial space ranged from \$2.40 all the way up to \$13.80 per foot net, averaging \$6.15. The Close-In Southeast submarket had the highest observed flex space rate at \$17.48 while the Close-In Northeast submarket had the highest observed industrial rate at \$13.80.

INDUSTRIAL LEASE RATE SUMMARY, 4TH QUARTER 2006 – CENTRAL EASTSIDE

SOURCE: LoopNet and Johnson Gardner LLC

VI. SPECULATIVE RETAIL MARKET

The Portland metropolitan area's retail market vacancy rate continues its fourteen-quarter gradual decline from a high of 9.2%. In the fourth quarter of 2006, the market absorbed a modest 46,000 square feet while adding almost 250,000 square feet of new space. Vacancy in tracked space on CoStar dropped last quarter's 4.9% to 4.8%. In regional and power centers, vacancy remained minimal, while community/neighborhood centers continued their positive trend, with vacancy dropping to only 3.6%. Mixed-use (8.6%) and strip/specialty/urban centers (7.6%) again had the highest vacancy rates, though occupancy was up substantially for both compared to the previous year.

BREAKOUT BY CLASS	Speculative	New	Inventory	Net	Vacancy	
	Inventory	Construction	Adjustments	Absorption	S.F.	Rate
Strip/Specialty/Urban	20,236,852	85,654	0	-6,187	1,540,451 #	7.6%
Community/Neighborhood	24,951,892	105,611	0	27,628	906,354 #	3.6%
Mixed Use	1,747,057	7,395	0	-104	150,224 #	8.6%
Power/Regional	11,479,008	48,586	0	24,963	206,883 #	1.8%
Total	58,414,809	247,246	0	46,300	2,803,911	4.8%

The most significant new development in the Region, Bridgeport Village in Tualatin, sold two years ago for a price of \$366 per square foot. The 465,000 square-foot lifestyle center has been well received, despite some parking concerns, and several new retail projects are scheduled for construction in the area along I-5. Major upcoming additions to Portland area retail include the 280,000 square-foot IKEA megastore, which is set to complete construction in spring of 2007, and Kohl's, which will be building three stores and converting a fourth.

A total of over 1.5 million square feet of new space is projected to enter the market over the next twelve months, while demand is expected to keep pace for the most part. While the Portland market has successfully absorbed recent surges in construction, this will be tested with the large amounts of new supply scheduled to enter the market in the next two years. Our demand model predicts market vacancy will edge up slightly through 2007, and continue upwards to over 6.0% by the first quarter of 2008.

Central City Subregion

The Central City subregion has performed extremely well in the past four quarters relative to other subregions in the Portland area. After witnessing vacancy rates in excess of 10.7% as recently as the third quarter of 2005, vacancies have now dropped to below 4.5%. At only 3.8%, the Central Business District (CBD) performed significantly better than the Northwest District which posted vacancy of 6.7%.

	Speculative Inventory	Net Absorption	Vacancy	
			S.F.	Rate
BREAKOUT BY CLASS				
Strip/Specialty/Urban	2,092,458	0	112,388	5.37%
Community/Neighborhood	588,947	7,211	7,601	1.29%
Mixed Use	367,785	698	29,120	7.92%
Power/Regional	388,444	0	2,146	0.55%
Total	3,437,634	7,909	151,256	4.40%
BREAKOUT BY SUBMARKET				
CBD	2,729,088	4,875	103,920	3.81%
Northwest	708,546	3,034	47,335	6.68%
Total	3,437,634	7,909	151,256	4.40%

Average rent levels for retail space in the Central City Subregion vary widely both by Class and by Submarket. Retail space for strip/specialty/urban space ranged from as low as \$10.00 to as high as \$48.00 per square foot. The disparity was just as great from community/neighborhood retail space which was slightly more affordable, ranging from \$4.80 on the low end, up to \$20.00 per square foot.

Mixed use retail space, which carries the smallest share of retail space in the Central City, displayed a tighter range, varying from \$14.00 to \$35.00 per square foot.

More affordable retail space was located in the CDB as opposed to the Northwest where high end retailers are more prevalent. Average rents ranged from \$4.80 to \$48.00 in the CBD, versus \$10.00 to \$35.00 in the Northwest.

VII. SUBMARKET SUMMARIES

Northwest District

COMPETITIVE ADVANTAGES

- Direct access to the Highway 30 coupled with access to the Stadium Freeway, provides the submarket with region accessibility in all cardinal directions.
- Proximity to the CBD, with streetcar, bus, bike and pedestrian links.

COMPETITIVE DISADVANTAGES/CONCERNS

- Congested streets, limited parking and potential conflict with residents
- Lower profile office space with limited visibility

OFFICE MARKET CONDITIONS

OCCUPANCY

- Current vacancy rests at approximately 10.7%, which slightly exceeds the regional average of 10.5%. However, current occupancy is higher than what is considered to be a healthy market, as demand has been lackluster in the local area.

RENT LEVELS:

Current rent levels in the Northwest District average between \$14.50 for Class B space and \$25.00 for Class C space. Rent levels in the submarket were relatively flat in the last half of 2006.

RETAIL CONDITIONS

OCCUPANCY

- There is currently over 700,000 square feet of retail space in the Northwest District. The amount of vacant space in the district remained declined slightly over the previous quarter to 47,000 square feet, or 6.7%.

RENT LEVELS:

- Retail rent levels in many Central City locations are on the rise. This is true in the Northwest District where rents have risen to around \$20.00.

Pearl District

COMPETITIVE ADVANTAGES

- Located In the most “trendy” part of Central City, with a wide range of surrounding uses.
- Also had direct access to the Stadium Freeway and excellent transit access.
- Portland’s cultural playground.

COMPETITIVE DISADVANTAGES/CONCERNS

- Proximity to competing office locations with stronger amenities i.e. downtown limits achievable lease rates in the Pearl.

OFFICE MARKET CONDITIONS

OCCUPANCY

- At 10.8% vacancy in the Pearl District is currently slightly higher than other neighborhoods west of the river. Vacancy is the highest among Class C properties at 15.3%, almost 10 percentage points higher either Class A.
- Recent trends demonstrate a falling vacancy rate after peaking at over 16% in the third quarter of 2003.

RENT LEVELS:

Rent levels have remained relatively stable in the Pearl District over the past year, displaying very little movement. The highest rents are achieved at Class A properties at \$35.00 per square foot. Rent Levels at Class B and Class C space properties are \$17.00 and \$18.00

RETAIL CONDITIONS

OCCUPANCY

- There is currently over 700,000 square feet of retail space in the Northwest District. The amount of vacant space in the district remained declined slightly over the previous quarter to 47,000 square feet, or 6.7%.

RENT LEVELS:

- Retail rent levels in many Central City locations are on the rise. This is true in the Northwest District where rents have risen to around \$20.00.

Old Town/Chinatown

COMPETITIVE ADVANTAGES

- Bordered by Broadway on one side, Burnside on the other, and the Glisan/Everett couplet running down the center, the smallest Central City neighborhood in terms of size benefits from three direct lines across the river to the east.
- Concentration of clubs and restaurants provide evening activity.
- Central location and proximity to the higher-priced CBD and Pearl
- Recent efforts to renovate the area have been somewhat successful.

COMPETITIVE DISADVANTAGES/CONCERNS

- High concentration of social service providers, and relatively high transient population
- Historical building inventory has limited re-use potential outside.

OFFICE MARKET CONDITIONS

OCCUPANCY

- Overall vacancy in Old Town is hurt largely by the prevalence of Class A office space.

RENT LEVELS:

- Rent levels have remained relatively level in the \$10.00 to \$20.00 range.

RETAIL CONDITIONS

OCCUPANCY

- With only a little more than 81,000 square feet of rentable retail space; Old Town is more of an office and residential neighborhood as opposed to a retail powerhouse. Old Town has recently seen a strong decrease in vacancy from its highest point of 28.7% three years ago.

RENT LEVELS:

- Rent levels in the neighborhood have displayed very little fluctuation over the past five quarters. Retail space in Old town currently achieves rents as low as \$5.00 per square foot.

Downtown

COMPETITIVE ADVANTAGES

- Most dense employment concentration in the metropolitan area.
- Key government services, including County and Federal Courthouses.
- Centrally located neighborhood that serves as the region's transit epicenter.
- Portland State University
- A comprehensive, full service location with an array of surrounding land uses.

COMPETITIVE DISADVANTAGES/CONCERNS

- Traffic/parking

OFFICE MARKET CONDITIONS

OCCUPANCY

- Occupancy in Downtown Portland is also performing average relative to other Central City neighborhoods. At 10.9% vacancy, the office market is not exactly strong but signs are pointing towards increased tightening in the market.
- Vacancy has steadily risen over the past five quarters, up roughly 4.0 percentage points over this interval.

RENT LEVELS:

- Rent Levels Downtown have been relatively stable in recent quarters, fluctuation very little during this time. The current average rents Downtown are up to about \$20.00 per square foot.
- Average Downtown rents vary little across Class types, reflecting the premium achieved on location alone.

RETAIL CONDITIONS

OCCUPANCY

- Excluding the Lloyd District which contains the Lloyd Center Mall, Downtown has the highest speculative inventory of retail space in the Central City with over 100,000 S.F. Vacancy in the district has steadily declined over the past four quarters from over 10.0% to under 5.0%.

RENT LEVELS:

- As the average vacancy rate has risen in the Downtown District, prices have steadily fallen as landlords attempt keep their buildings full. Retail rent levels have been as high as \$48.00 in recent months.

Goose Hollow

COMPETITIVE ADVANTAGES

- Light rail line runs directly through neighborhood.
- Direct Access to the Sunset Highway and the Stadium Freeway.
- High Visibility from these transit Corridors.
- Views from Hills at western edge of district.
- Multnomah Athletic Club

COMPETITIVE DISADVANTAGES/CONCERNS

- Light rail commute is over 20 minutes to east of the river with all Downtown stops.
- Lower profile office space with zero supply of Class A space

OFFICE MARKET CONDITIONS

OCCUPANCY

- Goose Hollow has consistently performed poorly in terms of vacancy relative to other Central City neighborhoods.
- Vacancy has fluctuated greatly over the last five quarters but is down near the average for the Central City.

RENT LEVELS:

- Despite the recent fluctuation in vacancy rates, rent levels have remained relatively stable in recent quarters. Current average rents range from \$15.00 per square foot for Class B to \$13.00 for Class C.

RETAIL CONDITIONS

OCCUPANCY

- Goose Hollow is one of the stronger neighborhoods in the Central City in terms of vacancy. Recent increases in occupancy have reduced vacancies to around 9.0%.

RENT LEVELS:

- Rents are relatively average for the Close-In Westside typically ranging between \$12.00 and \$20.00 per foot.

Homestead

COMPETITIVE ADVANTAGES

- OHSU
- Views
- Proximity to CBD

COMPETITIVE DISADVANTAGES/CONCERNS

- Limited access with no direct freeway access, no light rail, and limited transit service.
- Large amounts of vacant land located within the neighborhood.
- Difficult topography
- Lower profile office space with zero supply of Class A space

OFFICE MARKET CONDITIONS

OCCUPANCY

- Vacancy in Homestead is moderate although only seven office developments (two Class B and five Class C) are located within the neighborhoods.

RENT LEVELS:

- Average rent levels in Homestead have remained steady over the past year from at approximately \$16.00 per square foot.

RETAIL CONDITIONS

OCCUPANCY

- For the Homestead neighborhood, surveyable data was not sufficient enough to arrive at any occupancy conclusions.

RENT LEVELS:

- Rents are similar to other Close-In Southwest locations that are not on strong retail arterials.

Corbett/Terwilliger/Lair Hill

COMPETITIVE ADVANTAGES

- Retail concentrations on Highway 43.
- Over three miles of riverfront property.
- Several main north/south roads run through the neighborhood including I-5, 99W, Hwy 43, and Terwilliger Boulevard.
- Should benefit from the South Waterfront's development.

COMPETITIVE DISADVANTAGES/CONCERNS

- No light rail line.
- Large share of vacant and industrial property. Current waterfront usage is largely industrial.

OFFICE MARKET CONDITIONS

OCCUPANCY

- Vacancy in the submarket is low at below 5.0%, despite fact that the lion's share of RBA in the submarket is Class B. Vacancy has declined from the same period a year ago.

RENT LEVELS:

- Rent levels have remained relatively stable, averaging just under \$20.00 per foot. The highest rents are achieved on Class A space (\$22.00), closely followed by Class B (\$18.00), and Class C (\$14.00).

RETAIL CONDITIONS

OCCUPANCY

- Conditions in the Corbett/Terwilliger/Lair Hill submarket have been steadily improving over the past year. Current vacancy is below 3.0%, down sharply from 10.0% two years ago.

RENT LEVELS:

- As the market has been tightening up in the neighborhood rents have been displaying upward momentum. Current average rents of \$18.00 strong for the market area.

Hosford Abernathy

COMPETITIVE ADVANTAGES

- Hosford Abernathy benefits from strong regional access, with the eastside grid providing for more options. Furthermore, the Ross Island Bridge takes provides direct access to the I-5/I-405 interchange.

COMPETITIVE DISADVANTAGES/CONCERNS

- Lower profile office space with zero supply of Class A space.
- With the exception of the Lloyd District, neighborhoods on the Eastside tend have a lower concentration of office space and higher levels of residential and community retail.

OFFICE MARKET CONDITIONS

OCCUPANCY

- Vacancy in the Hosford Abernathy neighborhood is currently among the highest in the Central City at 17.9%.
- Due to the lack of supply in the area, leasing activity at a single property can cause substantial swings in occupancy.

RENT LEVELS:

- Because the majority of office space in the neighborhood is Class C, the average rent level is significantly lower than most areas. At current, total average rents range between \$8.00 and \$20.00.

RETAIL CONDITIONS

OCCUPANCY

- Conditions in Hosford Abernathy are similar to those witnessed by adjacent Kerns and Buckman. Vacancy has been relatively level over the past three years.

RENT LEVELS:

- Rents are typically \$15.00 per square foot.

Buckman

COMPETITIVE ADVANTAGES

- Buckman is located directly across the river from Downtown, providing excellent proximity to the regions retail and employment epicenter.
- The neighborhood is bordered by Burnside to the north, Hawthorne to the south, with Morrison running down the center, providing individuals three direct river crossings.
- Proximity to the water.

COMPETITIVE DISADVANTAGES/CONCERNS

- Lower profile office space with zero supply of Class A space

OFFICE MARKET CONDITIONS

OCCUPANCY

- Until the most recent quarter, vacancy in Buckman had been steadily falling since the first quarter of 2003.

RENT LEVELS:

- Currently rents range from \$8.00 to \$20.00 per square foot.

RETAIL CONDITIONS

OCCUPANCY

- Conditions in Buckman are similar to those witnessed by adjacent Hosford Abernathy and Kerns. Vacancy has been relatively level over the past three years.

RENT LEVELS:

- Rents are typically \$15.00 per square foot.

Kerns

COMPETITIVE ADVANTAGES

- Direct access and visibility via Interstate 84.
- Light Rail transit line to the north.

COMPETITIVE DISADVANTAGES/CONCERNS

- Lower profile office space with zero supply of Class A space
- Limited amount of waterfront property.

OFFICE MARKET CONDITIONS

OCCUPANCY

- Similar to high vacancies in other neighborhoods, the high levels are largely attributed to poor performance at one or two properties. This makes trends difficult to identify in what is not a significant office market.

RENT LEVELS:

- Again, rent levels in the area are significantly lower than the regional average due to the lack of Class A space.
- The overall average rent level in the area is below \$15.00.

RETAIL CONDITIONS

OCCUPANCY

- Conditions in Kerns are similar to those witnessed by adjacent Hosford Abernathy and Buckman. Vacancy has been relatively level over the past three years.

RENT LEVELS:

- Rents are typically \$15.00 per square foot.

Lloyd District

COMPETITIVE ADVANTAGES

- The Lloyd District is the Central retail and office location on the Eastside. It has more speculative office space than the other four Eastside locations combined.
- Direct access to the Westside via Broadway and the Broadway Bridge.
- Lloyd Center Regional Mall
- Proximity to both the yellow and blue rail lines, with fareless access.
- Major public facilities, such as the Rose Garden, Oregon Convention Center, Coliseum.

COMPETITIVE DISADVANTAGES/CONCERNS

- Poor pedestrian access to CBD

OFFICE MARKET CONDITIONS

OCCUPANCY

- The Lloyd District is one of the strongest office markets in the city with total vacancies, including available sublease space, below 7.5%.

RENT LEVELS:

- Rent levels in the Lloyd District are strong with a \$40 per square-foot asking rent observed at a small space. Class A office space in the submarket is similarly priced to Downtown; generally between \$20.00 and \$30.00.

RETAIL CONDITIONS

OCCUPANCY

- Naturally, the Lloyd District is going to be the most dominating retail location in the City Center courtesy of region super mall Lloyd Center. Excluding Downtown, the Lloyd district contains more speculative retail inventory than all the other evaluated Central City submarkets combined. Vacancy has been historically stable and currently measures 5.8%

RENT LEVELS:

- Like vacancy rates, rent levels in the Lloyd District have been historically stable. Rents vary greatly from \$4.20 to \$40.00 per square foot.

Eliot

COMPETITIVE ADVANTAGES

- Direct Access to and visibility from I-5, I-405, and Broadway
- Gentrifying residential.
- MLK/Grand Corridor

COMPETITIVE DISADVANTAGES/CONCERNS

- Largely surrounded by heavy industrial development.
- Lower profile office space with zero supply of Class A space

OFFICE MARKET CONDITIONS

OCCUPANCY

- Occupancy in Eliot and its surrounding areas has risen substantially and is now above 95%.

RENT LEVELS:

- Rent levels in the neighborhood range from \$9.00 to \$24.00

RETAIL CONDITIONS

OCCUPANCY

- Although rentable area in Eliot is scarce with only 28,788 S.F., the majority of buildings are at full occupancy.

RENT LEVELS:

- Rent levels in the neighborhood have not changed in recent quarters and are currently averaging below that of the Lloyd District.

The figure shows three box plots for Class A, Class B, and Class C, and three box plots for submarkets Barbur Blvd, Johns Landing, and Sylvan. The x-axis represents rent in dollars from \$0 to \$30. The box plots show the distribution of quoted rents, with the box representing the interquartile range, the line inside the box representing the median, and the whiskers extending to the minimum and maximum values.
