33.299 Wind Turbines

33.299.120 Setbacks and Height

The height of a turbine is measured to the tip of the rotor blade at its highest point. For pole mounted turbines, height is measured from grade at the base of the pole. For building mounted turbines, height is measured from the base point of the building.

- A. View Corridors.** Although the regulations of this section allow wind turbines to exceed the height limits of the base zones, they are not allowed to extend into a view corridor designated by the *Scenic Resources Protection Plan (1991)* or the *Central City Scenic Resources Protection Plan (2016)*.
