RE: Sample Results for Woodstock Community Center

Dear Chris,

Attached you will find the lead result for the water sample collected at Woodstock Community Center on July 21, 2016. The sample was collected in accordance with the protocol outlined in the EPA Technical Guidance, *3Ts for Reducing Lead in Drinking Water in Schools*. The 250 mL water sample was subsequently analyzed at the Portland Water Bureau Laboratory via EPA Method 200.8, an approved method for the analysis of lead in drinking water.

The EPA recommends follow-up testing if lead concentrations in any sample exceeds 20 parts per billion (ppb) to pinpoint the source(s) of lead contamination in your facility. Steps should be taken to mitigate elevated lead levels. Potential mitigation strategies, as well as sampling protocols, are outlined in the EPA guidance - *3Ts for Reducing Lead in Drinking Water in Schools*.

We encourage you to share this result with the public as soon as possible.

Please let us know if you have any questions on this result or any of the other information provided here.

Sincerely,

Yone Akagi, PE  
Water Quality Compliance Manager

## Portland Water Bureau Laboratory Report

### Woodstock Community Center
