City of Portland Bureau of Emergency Management Online Survey and Messaging NET

January 2017; N=174

How to Read Crosstables: In the example chart (left), rows represent the three possible response options to the question “All in all, do you think things are headed in the right direction, or are things pretty much on the wrong track?” The three response options are: “right direction,” “wrong track,” and “don’t know.” The amounts in each response category sum to the amount in the “total” row at the top of the table.

The first column, or banner, is the “Total” column. It reflects the overall results.

The next two columns reflect the results of a subgroup, “Gender.” The gender subgroup is composed of Males and Females, each with their own column. Both gender groups are assigned a letter (Male=B, Female=C).

These two columns show how male’s attitudes compare to female’s attitudes. As shown in the chart, 69% of the full sample thinks things are headed in the right direction. Looking at the gender subgroup, 71% of women think things are headed in the right direction, compared to 66% of males.

Statistically Significant Differences: If a pair of cells has a difference which is statistically significant, the larger of the two cells is flagged with the letter of the opposite column. The test shows the difference in female’s attitudes about things being headed in the right direction is statistically

significantly different than those of male’s, which is signified by a “B” (the letter given to Males) next to female’s results for “right direction.”

The footnote indicates the level of significance (sig=.05). This level of significance means that 5% of the time, the difference between how the two groups feel about the direction is due to random chance, while 95% of the time the difference is meaningful.

Statement of Limitations: Any sampling of opinions or attitudes is subject to a margin of error, which represents the difference between a sample of a given population and the total population. The margin of error is a statistic expressing the amount of random sampling error in a survey’s results and differs by sample size, as reflected in the table below.

Margin of Error Based on Sample Size

N=1200	N=1000	N=800	N=600	N=500	N=400	N=300	N=200	N=150	N=100	N=50
+/- 2.8%	+/- 3.1%	+/- 3.5%	+/- 4.0%	+/- 4.4%	+/- 4.9%	+/- 5.7%	+/- 6.9%	+/- 8.0%	+/- 9.8%	+/- 13.8%

DHM Research - Portland Bureau of Emergency Management Online Survey (Community Outreach) - January 2017

In this survey, we will be asking you to think about large-scale emergencies or natural disasters, such as floods or earthquakes.

Q1. How concerned are you about a natural disaster or emergency that would leave your household without electricity or water for at least two weeks?

	Age				Gender		Area				Income				Ethnicity		Household Size			
	Total	18-29	30-44	45-64	65+	Male	Female	West	North	Central/NE	East	< \$50K	\$50K- \$100K	\$100K- \$150K	\$150K Or >	White	Other	<=1	2	3+

Q18. Agree/Disagree that the following statement is true for you:
 If Portland experiences a major natural disaster or emergency, being individually prepared won't be enough.
 What really matters is how quickly government agencies bring help.

In a natural disaster or emergency, 95% of rescues are done by a neighbor.

Q33. Knowing this, how likely are you to take each of the following steps to help your neighborhood come together and be prepared for an emergency situation: Participate in emergency preparedness trainings that give me tools to help my neighborhood.

Q42. How motivating are the following statements in moving you to take more steps to prepare for a natural disaster or emergency:
 (SOCIAL PROOF) After a major disaster, 95% of people are rescued by their neighbors rather than emergency responders.
 When you and your neighbors prepare together, you can save a life.

Q49. The City of Portland is trying to determine how best to provide information to residents about preparing for a natural disaster or emergency. They need your help prioritizing the most effective ways to reach you. Choose the three most effective ways for you to receive information about how to help you and your neighborhood prepare for a natural disaster or emergency. Drag and drop your top three most effective ways into the box on the right, and organize them from most to least effective.

(3rd Most effective)
