## Force Report Definitions

### **PPB Force Demographics Summary Report:**

- *Total Subjects Involved in PPB Use of Force Incidents:*

This is the number of subjects who were involved in a unique force incident with an officer or officers. If a subject was involved in multiple unique force incidents with an officer or officers within this period, each will be counted separately. This number is greater than the number of total number of incidents reported because multiple subjects can be involved in any one incident. It is smaller than the number of reports written because more than one officer may have used force against one person and each officer is required to write their own report documenting their actions.

- *Individual Applications of Force by Gender / Race*

These numbers reflect the type of force used on a subject in a single incident. If Subject A was taken to the ground by Officer A and Officer B helped hold Subject A, Subject A could be counted in both the “Takedown” and “Holds” categories. If Subject B was held by both Officer A and Officer B, Subject B would be counted only once in the “holds category” despite the use of the same type of force by the two officers.

When the numbers in each category are added together, the total is less than the number of total reported uses of the same type of force because the specific type of force may be reported to be used by more than one officer on the same subject during the same incident. Multiple reporting can occur because multiple officers **may** report a single use of force or because multiple officers report multiple uses of the same type of force during a single incident.

- *Pointing Firearm Only*

This number represents the incidents in which officers only pointed a firearm at a subject and did not use any other type of force. Often, an officer may point a firearm at more than one person even though there is only one incident. For example, in a high-risk vehicle stop, each person in the vehicle is counted as an individual force incident.
