## Force Report Definitions

### **PPB Force Data Summary Report:**

- *Total Force Data Collection Reports Written:*

This is the number of force reports written during the time period listed, regardless of whether multiple reports were written by different officers concerning the same incident. This number is simply the total number of force reports entered into our database by PPB Records Division.

- *Type of Force Used:*

This is the number of the total reported uses of each type of force during the time period listed. The Force Data Collection Report the officers file after an incident include check boxes for the “Force Option Used.” This number is larger than the total number of force reports written because during any single incident more than one force option may have been used by one or more officers. Further, whenever multiple reports indicate the same force was used in an incident against the same subject, that type of force will be counted multiple times. For example, if Officer A and Officer B check the “Control Holds Causing Injury” box on their force reports for the same incident, there will be two counts of “holds causing injury.” This differs from, and is greater than, the same type of force listed in the demographics report. The reason for this is that the demographics report counts only the number of persons who were the subject of force, regardless of whether the type of force was used by more than one officer during the same incident.
