### Safety

#### Combined Bicycle Traffic over Four Main Portland Bridges Juxtaposed with Bicycle Crashes

The pie chart below illustrates the gender breakdown when a cyclist was assigned error in a crash between 1993 and 2005.

#### Age & Gender

Approximately 77% of all bicyclists in these crashes were male.
- From 1993-2005, there was a 20% increase in the percentage of female bicyclists on Portland's streets. In 1993, 25% of all cyclists on the road were female. In 2005, 30% were female.
- At the same time, the percentage of crashes involving a female cyclist is increasing. In 1993, 13% of crash participants were women and in 2005, 29% were women.

#### Errors, Roadway Locations, & Severity

The pie chart above illustrates the percentage of times an error is assigned to either or both participants in a bicycle crash from 1993-2005.

#### Bicycle Fatalities & Injuries: 1995-2004

#### Helmets

Helmet Use among Portland Cyclists, 1992-2006
