

53rd Ave/ Burnside Diversion

Testing Process

The proposed improvements restricting northbound and southbound access from Burnside will be tested prior to final implementation to ensure the changes meet the project objectives of reducing cut-through traffic volumes on 53rd Ave between Burnside and Glisan St, while at the same time not shifting the problem to adjacent residential streets.

The test will last for 6 months. Additional public involvement events will be scheduled to review the testing results. If problems are identified, additional mitigation will be considered, such as speed bumps on adjacent streets. If the test shows traffic volumes on adjacent streets increasing above 150 cars/day, the access restrictions will be removed.
