

National Bicycle and Pedestrian Documentation Project

City of Portland Manual Trail Count Results September 2014

Please note that Portland area count methodology has changed since 2009, and numbers between years are not directly comparable. Past counts included entire trail or street intersections and counted users on all legs of the intersection. In 2010, counts switched to a single corridor 'screenline' approach (only counting one street or trail) to better align with the data collection efforts of the National Bicycle and Pedestrian Documentation Project. In some cases, a second 'crossing' count was taken to collect information about demand for the cross street or trail.

Weekday

Weekend

Broadway Bridge @ top of NW Lovejoy ramp

Count Data: Location 5 - Weekday
