Fixing Our Streets Program Highlights

Compiled 12/6/16

Base Repair Paving Projects

Base Repair paving projects are completed to repair portions of streets which are in poor or very poor condition. Base Repair work began in September and PBOT's Maintenance Operations crews have now completed 20 Base Repair projects with Fixing Our Streets funding. These small, relatively quick projects, located throughout the City, allow us to focus on areas with structural failure and to prevent these failures from spreading to larger portions of a street. PBOT crews will continue Base Repair work for the four-years of the Fixing Our Streets program.

Safe Routes to School (SRTS)

Safe Routes to School Project Planning is underway. A contract with Toole Design Group, a state-certified MWESB (Minority-Owned, Women-Owned, Emerging Small Business) consultant team is being finalized and will be reviewed by City Council in December. The consultant will help to create a project list for infrastructure improvements with clear priorities for Fixing Our Streets funds around each elementary and middle school in Portland and a strategic plan to support outreach by the SRTS program. We will be inviting community stakeholders to participate in an advisory committee in early January and PBOT staff are in the process of scheduling open houses and outreach activities for each high school cluster. The first open house will be last week of February.

Major Paving Projects

Five major paving projects are underway, including N. Columbia Blvd. which is being funded by the Heavy Vehicle Use Tax. They are all currently in the design phase, and the construction bidding process will be beginning in summer 2017. We are identifying opportunities for efficiencies and coordination between paving and other infrastructure work. For example, the SE Foster paving project is being coordinated with the SE Foster Road safety improvement and the NE Halsey paving project is being coordinated with the Halsey-Weidler Streetscape Project. The SW Naito and SW Main paving projects have been combined and will include the addition of bike facilities. The SW Naito project also provides an opportunity to permanently restore the bus stop at SW 1st and Main with a concrete bus pad and to upgrade traffic signals, work which has been triggered by the ADA ramps. Some of this work will be funded with existing PBOT signal reconstruction resources. This

paving and safety project coordination allows for less costly and more efficient delivery of PBOT's projects.

Sidewalk Infill

Four of the five Fixing Our Streets sidewalk infill projects are already in motion. The infill projects on SE 112th, NE 102nd, and SE Flavel are all currently in design and on track to be constructed this summer. The design contracts are all with the emerging small business Emerio Design. The larger SW Capitol Highway sidewalk project has more complicated design considerations and planning, design and community outreach have begun for this project although construction is not expected until 2020.

East Portland In Motion Separated Bike Lanes

The East Portland In Motion Separated Bike Lanes project will focus on SE Division street between I-205 and SE 130th. SE Division Street, a high crash corridor, was one of the priority separated bikeway projects identified in the East Portland in Motion Plan (EPIM), which was adopted by City Council in 2012. The FOS project will focus on this section of Division and staff hopes to leverage these funds with additional funding to extend the project to the east to the City limits and to the west to SE 82nd. Ave.

Public Outreach Summary

- East Portland Town Hall - Nearly 100 Outer East Portland community members attended the Fixing Our Streets East Portland Town Hall in September. Attendees heard an overview of the FOS program and were able to talk to individual project managers about FOS projects coming to East Portland as well as additional East Portland PBOT work.
- PBOT Staff have already attended over 30 neighborhood/community meetings to discuss Fixing Our Streets projects
