

Washington Park Reservoir Improvement Project

Amanda Fritz, Commissioner
Michael Stuhr, PE, Administrator

NIGHT WORK

December 2018 – November 2019

Concrete will be poured for the floor slab, support columns, walls and roof of the new reservoir. Due to the size and volumes of concrete deliveries, they will begin in the early morning, in some cases as early as 2:30 am and will continue through the day, with new concrete trucks arriving approximately every 3 - 5 minutes. Concrete deliveries should be completed before 6 pm but on site work will continue beyond that time to complete the finishing work.

The reservoir floor slab will be poured in 12 sections. Each section will be poured in a single day. For the first four slab sections, there will be 30-40 days between each of the pours. Pour frequency will increase after that, as walls, columns and roof are poured atop completed slab sections. While it is anticipated that there will be several days between pours, there may be limited short term cases where pours will occur daily.

DELIVERY ROUTE

The construction site is tightly constrained with extremely limited space to maneuver once the pouring begins on slab sections. Because of this it is essential to have multiple routes for delivery of concrete, so trucks can access specific locations.

Trucks are allowed to come into the site by the following routes:

- Off SW Jefferson St. into the jobsite
- Off W Burnside to SW Tichner to Marconi to Sacajawea to Lewis Clark Way and into the jobsite
- Up SW Park Place, around Lewis Clark Way and into the jobsite
- Down the Madison Trail as needed.

Existing the site will also utilize these routes.

If you have concerns during night work, please call **Geoff Christie at 503-710-6902** for an immediate response.

Please contact me with any questions or concerns about the project:
