

WHAT'S HAPPENING NOW

About 60% of the reservoir foundation has been put into place now, and 20% of the wall sections have been constructed. Crews will continue to prep and pour foundation slabs and wall sections through the end of the year. By the end of year, the first of the support columns will be poured. Columns will support the roof of the new reservoir when it's in place. To see the August 2019 updates with information and photos of work performed over the past month, click [HERE](#).

Pour Schedule

Quickly check pour schedule on the project webpage, which is update as information becomes available. You can visit the webpage [HERE](#).

Pours can begin as early as 3:00 a.m. and will typically continue into the late afternoon. Concrete trucks will be arriving about every five minutes throughout the process.

See how the elements of the new reservoir fit together within the footprint of the historic reservoir [HERE](#).
